Commissioner John T. Colgan
Commissioner Anne McCabe
Commissioner Miguel del Valle
Commissioner Sherina E. Maye

Dear Chairman Scott and Commissioners:

As mayors, presidents, and other elected local government and business leaders from across northern Illinois, we are concerned with ensuring that our citizens have access to information that provides them with the opportunity to make informed decisions, particularly decisions that can save them money. When the Energy Infrastructure Modernization Act was passed into law by the Illinois General Assembly, one of the promises of the legislation was the introduction of smart meters and the benefits they would bring to our citizens. The law requires that ComEd plan to complete meter installation by 2021. However, ComEd is now prepared to complete the installation by the end of 2018. We, the undersigned, support ComEd's petition to accelerate the timetable to install smart meters.

For many of our communities, ComEd's plan will bring smart meters and their benefits 1-3 years sooner than does the existing plan. This means our constituents, employees, and customers will more quickly be able to better manage their energy usage and take proactive steps to reduce their energy consumption and costs. They also will enjoy the cost savings brought via operational efficiencies ComEd will gain by accelerating smart meter deployment. Also, new pricing programs made easier by smart meters mean that participants can use energy at its most efficient and cheapest.

Smart meters will ultimately make it possible for ComEd to know where power interruptions are occurring, eliminating the need for our citizens to report the interruptions themselves and making it possible for ComEd to respond more quickly.

Additionally, meter acceleration will create new jobs to ensure ComEd can meet the new schedule. Any job creation effort is key as the state of Illinois continues to recover from the economic downturn.

The installation of more than 200,000 smart meters has gone smoothly in towns within ComEd's deployment area so far. We are excited about the possibilities for people in our communities to use smart meters to more actively participate in managing their energy usage and control their energy costs.

Therefore, we urge the ICC to accept ComEd's proposal to accelerate smart meter deployment, and have asked ComEd to submit this letter to the Commission in a manner consistent with the Commission's rules.

Sincerely,

Charles R. "Skip" Lee
