Per our discussion of today, this project is alive and well with building permit applications having been submitted last Friday to the City of Chicago department of DCAP, Developers Services. We are led to believe that the construction permits may be available in thirty days.

The sewer approval is in place and the water approval will be in place within the next couple of weeks.

The project is in contractor bidding now and we expect selection to be complete in approx. three weeks.

The gas installation plan remains the same in that Peoples will bring the gas on to the property for approximately 30ft. and install the meter and RSI will

.....

install approximately 1200ft. of 4" medium pressure plastic main. Peoples will witness a pressure test on the customer main prior to turn on.

The "hot box" originally planned and indicated on our entrance location sketch has been replaced by a meter vault under the sidewalk.

When I visited the site with Nina Leonard we indicated the meter location as being positioned behind the open entry gate to the property and that location is still good.

Both the sanitary sewer and the new water services will be excavated and installed in the same vicinity so coordination is important.

Sandman Inc. will provide construction oversight management services to RSI and assist in contractor coordination.

Please find attached a copy of our last correspondence to Nina Leonard. We did receive a copy of an installation estimate however no easement request was ever forwarded to Susan Miracles ay MWRD.

Please contact me with any additional questions and assist in the expediting of this matter as construction will begin immediately upon issuance of the permits and the utilities entrances are the first priority.
