Docket No. 06-_____

Direct Testimony Of

THOMAS J. FLAHERTY

Senior Vice President

BOOZ ALLEN HAMILTON INC.

On Behalf of the Applicants

**TESTIMONY OF THOMAS J. FLAHERTY
SENIOR VICE PRESIDENT
BOOZ ALLEN HAMILTON**

T A B L E O F C O N T E N T S

I.	INTRODUCTION AND QUALIFICATIONS	1
II.	PURPOSE OF TESTIMONY	4
III.	SUMMARY OF TESTIMONY	5
IV.	SYNERGIES IDENTIFICATION	12
V.	DETAILED COST SAVINGS	24
VI.	COSTS-TO-ACHIEVE AND PRE-MERGER INITIATIVES	58
VII.	ALLOCATION OF COST SAVINGS AND COSTS-TO-ACHIEVE	66
VIII.	CONCLUSION	75

**TESTIMONY OF THOMAS J. FLAHERTY
SENIOR VICE PRESIDENT
BOOZ ALLEN HAMILTON**

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. PLEASE STATE YOUR NAME AND BY WHOM YOU ARE EMPLOYED.**

3 A. My name is Thomas J. Flaherty, and I am a Senior Vice President in the Energy and
4 Utilities practice of Booz Allen Hamilton. My business address is 901 Main St., Suite
5 6500, Dallas, Texas 75202.

6 **Q. WOULD YOU BRIEFLY SUMMARIZE YOUR ACADEMIC AND
7 PROFESSIONAL BACKGROUND?**

8 A. I graduated from the University of Oklahoma with a B.B.A. degree in Accounting and
9 immediately joined Touche Ross & Co., where I began my career as a management
10 consultant. Subsequently, I worked for Deloitte & Touche (formed by the merger of
11 Touche Ross and Deloitte, Haskins & Sells in 1989) for more than 30 years until joining
12 Booz Allen Hamilton (“Booz Allen”) as a Senior Vice President. Over the course of my
13 consulting career, I have specialized in the public utility industry and have performed a
14 variety of assignments.

15 I have assisted managements from a number of electric and/or gas utilities in the
16 identification, evaluation and integration of acquisitions, including: screening analysis;
17 review of corporate restructuring alternatives; assessment of merger-related cost
18 reduction opportunities; development of regulatory strategies; planning and execution of
19 merger integration; and, assignment and allocation of costs and benefits related to
20 mergers and acquisitions. In addition to my involvement in merger and acquisition

Docket No. 06-_____
Applicants’ Ex. TJF-1.0

21 consulting, I have participated in numerous other utility consulting engagements in the
22 areas of corporate growth, diversification, restructuring, organizational analysis, business
23 process reengineering, benchmarking, strategic planning, strategic marketing, litigation
24 assistance, economic feasibility studies, regulatory planning and analysis, and financial
25 analysis.

26 I also have conducted or directed similar assignments for a variety of industries,
27 including construction, retailing, publishing, health care, real estate and manufacturing, in
28 addition to utilities. Applicants' Ex. TJJF-1.1 details my previous experience with
29 regulated utilities.

30 **Q. PLEASE SUMMARIZE YOUR EXPERIENCE IN UTILITY MERGERS AND**
31 **ACQUISITIONS.**

32 A. I have evaluated more than 300 actual, proposed or potential transactions involving
33 electric, electric and gas combination, gas, or water utilities. I have experience working
34 for both buyers and sellers and have assisted client managements in their assessment of a
35 broad range of transactional issues, including the following:

- 36 • Target analysis
- 37 • Asset quality analysis
- 38 • Customer analysis
- 39 • Competitor analysis
- 40 • Synergy assessment
- Financial analysis
- Transaction structuring
- Regulatory strategy
- Testimony
- Integration planning

41 The publicly announced transactions in which I have been significantly involved,
42 other than the one that is the subject of this proceeding are: Kansas Power & Light and
43 Kansas Gas and Electric, IPALCO Enterprises and PSI Resources, Entergy and Gulf

44 States Utilities, Southern Union and Western Resources (Missouri properties),
45 Washington Water Power and Sierra Pacific Resources, Midwest Resources and Iowa-
46 Illinois Gas & Electric, Union Electric and CIPSCO, Northern States Power Company
47 and Wisconsin Energy Corporation, PECO Energy Company and PPL Resources, Public
48 Service Company of Colorado and Southwestern Public Service Company, Baltimore Gas
49 & Electric and Potomac Electric Power Company, Delmarva Power and Atlantic Energy,
50 WPL Holdings, IES Industries and Interstate Power, Puget Sound Power & Light and
51 Washington Energy, TU Electric and ENSERCH, Western Resources and Kansas City
52 Power & Light, Western Resources and ONEOK, Inc. (Kansas, Oklahoma gas
53 properties), Houston Industries and NORAM Energy, Ohio Edison and Centerior,
54 ENOVA and Pacific Enterprises, Brooklyn Union Gas and Long Island Lighting,
55 Allegheny Energy and DQE, Inc., LG&E Energy and KU Energy, NIPSCO Industries
56 and Bay State Gas, American Electric Power and CSW, BEC Energy and COM Energy,
57 Northern States Power and New Century Energies, Dynegy and Illinova, DTE Energy and
58 MCN Energy, ConEdison and Northeast Utilities, PECO Energy and Unicom, AGL
59 Resources and Virginia Natural Gas, Energy East and RGE Energy, FPL Group and
60 Entergy, PNM Resources and TNM Enterprises, Exelon and PSEG Enterprises, Duke
61 Energy and Cinergy, and Constellation Energy Group and FPL Group.

62 **Q. DO YOU HOLD ANY PROFESSIONAL CERTIFICATIONS?**

63 A. Yes. I am a Certified Management Consultant and a member of the Institute of
64 Management Consultants.

65 **II. PURPOSE OF TESTIMONY**

66 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

67 A. I have been asked to appear for WPS Resources Corporation and Peoples Energy
68 Corporation (collectively, “the Companies”) to sponsor the benefits and costs analysis
69 identifying the merger-related synergies from the announced combination of the
70 Companies. Booz Allen assisted the managements of both Companies in the
71 identification and quantification of potential cost savings resulting from the proposed
72 merger of the companies.

73 In this testimony I: (1) describe the categories of merger-related cost savings that
74 are believed available from the merger of the Companies; (2) provide the basis for
75 quantification of estimated merger-related cost savings; (3) explain the basis for and
76 importance of costs-to-achieve on the identified savings; (4) describe the process by
77 which such identified cost savings categories and estimated merger-related cost savings
78 were derived by the Companies; (5) compare the level of merger-related cost savings
79 identified in this merger with other transactions with which I am familiar, and; (6)
80 describe the approach to allocating the savings and related costs-to-achieve to the
81 jurisdictional level.

82 **Q. HAVE YOU INCLUDED ANY EXHIBITS TO YOUR TESTIMONY?**

83 A. Yes. Applicants’ Ex. TJF-1.1 is a summary of my experience with regulated utilities,
84 while Applicants’ Ex. TJF-1.2 provides a five-year summary of potential merger cost
85 savings, Applicants’ Ex. TJF-1.3 provides a detailed breakout of costs that may be
86 incurred to achieve the identified merger, and Applicants’ Exs. TJF-1.4, TJF-1.5 and TJF-

87 1.6 provide a summary of the results of the allocation of costs savings and costs-to-
88 achieve to the respective jurisdictions within the combined utility, specifically Illinois
89 operations.

90 **III. SUMMARY OF TESTIMONY**

91 **Q. PLEASE SUMMARIZE YOUR TESTIMONY.**

92 A. The combination of the Companies should enable the realization of substantial benefits in
93 the form of economies, efficiencies and operating effectiveness across the corporate,
94 shared services, regulated and, certain non-regulated operating areas. These synergies
95 relate to a variety of operational functions and should result in benefits that will accrue to
96 customers now, and in the future. These savings are directly attributable to the merger and
97 would not occur in its absence.

98 The combination of the Companies is expected to provide the potential for
99 approximately \$401 million in total gross cost savings to be realized across the corporate,
100 shared services, regulated and, non-regulated businesses over the first five years
101 following the close of the merger. This total includes approximately \$29 million in gross
102 cost savings that are directly attributable to the non-regulated business segment,
103 specifically the energy services business.

104 In addition, approximately \$197 million in total corporate, shared services,
105 regulated and, non-regulated costs-to-achieve and other offsets to the identified savings
106 have been estimated associated with the closing of the transaction or the realization of the
107 savings, of which approximately \$8 million directly relates to the non-regulated segment.
108 These non-regulated cost savings and costs-to-achieve are excluded from further

109 discussion in my testimony as they do not relate to any aspect of the regulated business.
110 The total level of identified cost savings and costs-to-achieve are illustrated in Table 1.

111 With respect to the corporate and regulated business segments, the managements
112 of the Companies have identified approximately \$373 million of corporate, shared
113 services and utility operating support-related gross cost savings over the first five years
114 following the close of the transaction. In addition, approximately \$178 million of out-of-
115 pocket costs-to-achieve these savings and \$11 million of cost cutting measures planned or
116 initiated by the Companies prior to the merger (pre-merger initiatives) have also been
117 identified. The above corporate and regulated amounts are before any overall allocations
118 between the regulated and non-regulated business segments and net to approximately
119 \$184 million which is expected to benefit all stakeholders, including customers and
120 shareholders, and result in a stronger, more competitive company. These savings will
121 also be achieved without any adverse impacts to service quality, reliability or safety as the
122 areas identified do not relate to direct operating areas. The net \$184 million in corporate
123 and regulated cost savings is also shown in Applicants' Ex. TJF-1.2.

TABLE 1: Total Merger Cost Savings and Costs-to-Achieve

Potential Areas (\$ in 000s)	(\$ in thousands)					
	Year 1 2007	Year 2 2006	Year 3 2009	Year 4 2010	Year 5 2011	5-Year Total

<hr/>						
Gross Total Non-Regulated Savings	\$4,814	\$5,335	\$5,921	\$6,167	\$6,424	\$28,661
Costs-to-Achieve	(\$2,334)	(\$3,097)	(\$749)	(\$2,113)	(\$1)	(\$8,297)
Total Non-Regulated Savings	\$2,480	\$2,237	\$5,178	\$4,054	\$6,423	\$20,364
Net Regulated, Corporate and Non-Regulated Savings	(\$58,156)	\$40,307	\$71,214	\$56,967	\$93,906	\$204,238

125 From a customer perspective in particular, the cost savings identified above from
126 the merger of the Companies, once appropriately allocated to the regulated business, are
127 anticipated to permit lower rates than otherwise would have resulted on a stand-alone
128 basis for either of the two Companies regulated subsidiaries.

129 The estimated cost savings referenced above reflect direct merger-related
130 corporate and regulated business support synergies. They reflect the consensus of both
131 Companies and were jointly developed by management of the Companies, with the
132 assistance of Booz Allen. This joint development of merger-related cost savings
133 provided a sound basis for identification and quantification and results in fully-
134 documented and agreed-upon savings. As a result, the process utilized by the Companies
135 was comprehensive and captures all significant sources of merger-related cost savings
136 typically available.

137 The estimated cost savings reflect the potential creation of cost reduction or cost
138 avoidance opportunities through the ability to consolidate separate, stand-alone
139 operations into a single entity. This consolidation and integration thus may enable
140 duplicative functions and positions to be eliminated; similar activities to be combined,
141 avoided or reduced in scope; external purchases of commodities and services to be
142 standardized, rationalized and aggregated; and certain capital expenditures to be avoided.

143 Based on my experience in other mergers and on my direct involvement with the
144 identification, evaluation, and quantification efforts related to estimated cost savings in
145 this and other transactions, the process utilized for estimating potential merger-related
146 cost savings was consistent with the process utilized by other companies in previous

147 merger transactions. As a result, I believe the level of merger savings identified by the
148 Companies is reasonably attainable provided that management executes its integration
149 plans in a manner consistent with its intent and how other utilities have pursued similar
150 opportunities.

151 The identified merger cost savings are also within the broad range of those
152 developed by other companies in other similar situations recognizing the unique
153 characteristics of both companies. The estimated levels are well within the range of other
154 transactions for staffing reductions and for non-fuel operations and maintenance expense.

155 Utility mergers and acquisitions in other states have produced substantial benefits
156 to customers in the form of operational synergies and cost savings that reduce rates or
157 slow the rate of growth in rates. Benefits to customers, however, will not materialize
158 without costs being incurred and risks being assumed. In particular, out-of-pocket costs
159 are incurred in the ordinary course of business to execute a transaction, comply with the
160 various requirements of third-party agencies, successfully integrate the businesses and,
161 close a transaction. In a number of cases, expenditures are incurred solely for the
162 purposes of fulfilling fiduciary responsibilities, satisfying public agency filing
163 requirements or demonstrating the benefits that are conveyed in the transaction. These
164 costs require up-front expenditure of these out-of-pocket amounts without assurance that
165 a transaction will, in fact, be closed. Other expenditures are incurred to assure that
166 employees are treated equitably and that the business is ready for transparent operations
167 on day-one after the close.

168 In any merger transaction, shareholders assume the risk that the merged entity will
169 achieve the strategic, financial, and operational benefits set forth as the rationale for the
170 proposed combination. To the extent these objectives are not attained (e.g., failing to
171 realize cost savings), shareholders suffer from eroded equity value and / or lower returns.
172 It is my opinion and an established regulatory principle that, to compensate for these risks
173 and to reflect the shareholders' willingness to fund the costs necessary to realize potential
174 cost savings, the utility should be provided the opportunity to recover the costs-to-
175 achieve these savings and that the resulting net cost savings should be equitably shared
176 between customers and shareholders. This principle is borne out in a number of prior
177 transactions where regulatory decisions have provided for equitable savings sharing after
178 the consideration of related costs-to-achieve.

179 The cost savings and costs-to-achieve from this transaction will flow both to the
180 non-regulated business and to the customers within the specific regulated jurisdictions of
181 the Companies. The approach adopted to allocate these merger savings and costs to the
182 non-regulated businesses and to the relevant jurisdictions resulted in the development of
183 specific allocation factors for each savings and cost-to-achieve category. These specific
184 allocation factors were utilized to establish as direct an allocation basis as possible, given
185 the nature of the savings and costs and the factors most closely related to incurrence of
186 these elements.

187 In developing this approach the current allocation bases and existing affiliate
188 interest agreements for the Companies were considered as a starting point. However,
189 differences in underlying approach between the Companies necessitated the utilization of

190 an alternative method that would provide a fair basis for allocation of savings and costs in
191 this proceeding, while preserving flexibility regarding a more permanent, cost-of-service
192 based approach at a later time. The existing allocation methods were first aligned, where
193 possible, to the identified savings and costs-to-achieve category. Additional allocation
194 factors that linked more directly to cost causation for the specific categories were then
195 used to supplement the existing allocation approaches. The resulting assignment of
196 savings and costs-to-achieve to specific jurisdictions, thus takes into account the existing
197 methods employed by the Companies and incorporates specific allocation factors to
198 reflect cost incurrence relationships. The results of this allocation approach are presented
199 in Applicants' Exs. TJJ-1.4, TJJ-1.5 and TJJ-1.6.

200 It is critical to the ability of companies to pursue and complete business
201 combinations of the nature proposed with this transaction, for an equitable outcome to be
202 achieved with respect to the sharing of identified allocable regulated merger synergies
203 between customers and shareholders. This equitable outcome can be accomplished
204 through numerous means, but in the end, should result in distribution of identified
205 allocable regulated merger synergies that provides direct benefits to customers, while
206 fairly compensating shareholders for the cost and risks they have assumed. Additionally,
207 the agreed upon equitable sharing mechanism should continue beyond the regular
208 ratemaking cycle to recognize the need for achieving an equitable overall result over time.
209 This approach thus provides the opportunity for both customers and shareholders to be
210 fairly compensated for the risks and expenses associated with completing the merger.

211 **IV. SYNERGIES IDENTIFICATION**

212 **Q. IN GENERAL, HOW ARE SAVINGS CREATED FROM THE COMBINATION**
213 **OF TWO UTILITY HOLDING COMPANIES?**

214 A. The combination of two utility holding companies enables the succeeding company to
215 realize substantial benefits in the form of economies, efficiencies and operating
216 effectiveness that would not otherwise be available to either company on a stand-alone
217 basis. These synergies relate to a variety of operational functions and potentially will
218 result in benefits that will directly accrue to customers. These potential savings areas are
219 viewed as directly attributable to the merger and would not be attainable in the absence of
220 the merger.

221 **Q. ARE THERE DIFFERENT TYPES OF COST SAVINGS THAT CAN RESULT**
222 **FROM THE COMBINATION OF TWO UTILITY HOLDING COMPANIES?**

223 A. Yes. In identifying potential cost savings, only those opportunities that are directly
224 related to the merger were quantified. The distinction between merger and non-merger
225 related savings is highlighted below:

- 226 • Created savings - These are savings that are directly related to the completion of a
227 merger and could not be obtained absent the merger. For example, the reduction of
228 total cost through the avoidance of duplication or overlap and the ability to extend
229 resources over a broader base of operating activities would naturally occur through
230 the consolidation of similar functions. Without the combination, both companies
231 would continue to expend amounts on related activities, and as a result, would incur
232 stand-alone cost levels higher than after consolidation.
- 233 • Enabled savings - These savings result from the acceleration or “unlocking” of certain
234 events that could give rise to savings and therefore are considered merger savings.

235 For example, technology differences that exist between companies may provide an
236 opportunity to share technology and achieve productivity improvements more rapidly
237 and more cheaply than would have occurred on a stand-alone basis. For example, one
238 company that has adopted an enterprise resource planning information management
239 approach will likely enjoy more seamless operation and management, lower costs and
240 higher productivity than a company that has individual, customized packaged
241 applications requiring unique support. While the company without the integrated
242 technology environment can obtain such benefits from independent investment, the
243 merger enables an existing technology environment to be more rapidly deployed and
244 costly stand-alone investment and concept feasibility analysis to be avoided.

- 245 • Developed savings - Reductions in cost due to management decisions that could have
246 been made on a stand-alone basis are unrelated to the merger. A decision to
247 restructure or reorganize an organization will result in reduced costs but likely would
248 have been achieved without the merger. None of the cost savings described in my
249 testimony are in this category.

250 **Q. WHAT TYPES OF SAVINGS HAVE BEEN QUANTIFIED WITH RESPECT TO**
251 **THE WPS RESOURCES AND PEOPLES ENERGY MERGER?**

252 A. The quantification effort focused on merger-related savings only, i.e., those savings that
253 would not be attainable but for the combination of the two companies. The savings
254 described in my testimony fall under the "created savings" category described above.
255 Potential areas of benefit, and subsequently the resulting cost savings, are determined to
256 be merger-related if they are not attainable by any action that management of either
257 company could practically initiate on an independent basis. For example, management of
258 either company could reduce labor costs by eliminating positions as part of undertaking a
259 comprehensive performance improvement program. These reductions, however, would

260 relate solely to that entity's independent operations and would not be related to any
261 merger effects.

262 Quantified merger-related savings result only from action taken by management in
263 association with the combination of the Companies. For example, the fact that both
264 companies maintain separate investor relations activities provides an opportunity to
265 consolidate these functions and avoid replication. This integration of similar functions
266 and activities would not be possible without the merger of WPS Resources and Peoples
267 Energy. Thus, the benefits identified are only those believed to be directly attributable to
268 the merger.

269 Additionally, cost savings or cost avoidances that result from the new size and
270 economic scope of the combined entity are merger-related. For example, routine
271 activities that could not be economically outsourced by either company individually may
272 now be candidates for outsourcing, given the new combined entity's greater volumes.
273 Similarly, other activities that either of the companies now outsource might be performed
274 more cost-effectively internally by the combined entity where volumes now justify
275 specialized resources. The greater size of the combined entity should also enable it to be
276 a more cost-effective purchaser of various products and services. Further, to the extent
277 that the combination of two companies enables the companies to reduce costs by
278 transferring technology or competencies to each other, these benefits are also merger-
279 related if such actions could not have been effectively implemented by the companies
280 independently, or if such transfers enable operating costs to be reduced more rapidly or to
281 a lower level than otherwise would have been the case.

282 Each of the examples described above, as well as other cost savings or cost
283 avoidances that are directly attributable to the merger, are considered merger-related
284 synergies. Conversely, cost savings or avoidances that would have occurred even in the
285 absence of the merger are not merger-related and should not be included in a calculation
286 of the savings attributable to the merger.

287 **Q. WHAT TYPES OF QUANTIFIED BENEFITS TYPICALLY RESULT FROM**
288 **THE COMBINATION OF TWO UTILITY HOLDING COMPANIES?**

289 A. Savings estimates reflect those areas where the total level of costs can be affected by
290 actions of management that are the direct result of the combination of WPS Resources
291 and Peoples Energy. These savings areas are derived from the operational synergies that
292 are created upon integration of two previously independent operations. These savings
293 areas would typically impact operations in the following ways:

- 294 • Cost reduction - The total cost of service is reduced as a result of the merger by
295 avoiding duplication of the cost input required to achieve the same level of output.
296 For example, similar operating functions, such as corporate planning, could now be
297 integrated and would require less input to achieve results on a combined basis.
- 298 • Cost avoidance - The total cost of service is reduced due to the ability to forego
299 certain types of parallel expenditures. For example, redundant expenditures required
300 by both entities (e.g., information systems) could be avoided by selecting one set of
301 development efforts to forgo duplication.
- 302 • Revenue enhancement - The creation of additional revenue streams by using existing
303 regulated assets to supplement revenue sources could also be a means to increase
304 benefits for shareholders and customers. These revenue streams would be related
305 directly to utilizing available resources, such as storage assets, in a more attractive

306 manner, *i.e.*, to produce or increase commodity sales, than could be achieved
307 independently.

308 **Q. WHAT SPECIFIC CATEGORIES OF QUANTIFIABLE SAVINGS CAN BE**
309 **EXPECTED TO RESULT FROM A UTILITY HOLDING COMPANY MERGER?**

310 A. Quantifiable savings resulting from a merger typically can be categorized as follows:

- 311 • Corporate and Headquarters Staffing
- 312 • Utility Back-Office Staffing
- 313 • Corporate and Administrative Programs
- 314 • Information Technology
- 315 • Supply Chain
- 316 • Gas Supply

317 Each of these categories have been identified in this merger and will be described later in
318 my testimony. These savings areas relate to common functions and costs within the
319 business and do not directly relate to service performance and areas that may affect
320 service quality, reliability or safety.

321 **Q. WERE COSTS-TO-ACHIEVE ALSO IDENTIFIED IN THE MERGER COST**
322 **SAVINGS ANALYSIS?**

323 A. Yes. Certain costs must be incurred to facilitate the realization of the identified cost
324 savings. Costs-to-achieve are an inherent component of any merger transaction and are
325 necessary to successfully complete a transaction and/or produce the level of intended
326 benefits. These costs-to-achieve are expenses that are directly related to pursuing or
327 executing the transaction and have the effect of offsetting the level of distributable
328 benefits. Were the total cost savings to be distributed without recognition of these costs

329 to achieve, the utilities would, in effect, be distributing a greater level of savings than in
330 fact exist.

331 In addition, if these out-of-pocket costs were not recognized as a related element
332 of producing cost savings, the Companies would effectively be required to support such
333 expenditures without reimbursement. Thus, to be equitable to all parties, it is only the net
334 level of savings that is available for sharing with customers. In the vast preponderance of
335 utility merger transactions with which I am familiar, costs-to-achieve have been
336 considered and recognized in determining the net level of benefits available to customers
337 and shareholders. In other words, costs to achieve have been recognized and netted
338 against gross merger synergies in determining distributable savings to customers and
339 shareholders.

340 **Q. WHAT PROCESS WAS UTILIZED BY THE COMPANIES IN DEVELOPING**
341 **THE ESTIMATED COST SAVINGS ASSOCIATED WITH THE PROPOSED**
342 **MERGER?**

343 A. The process began by examining underlying data related to the organization of each of the
344 Companies from both publicly available and internally provided sources. This
345 information encompassed geographical, organizational and operational data and included:
346 total numbers of positions, positions distributed by various departments, position
347 location, and related salaries and benefits.

348 Next, information related to specific cost categories, including recent actual and
349 expected future expenses for these categories, was identified and obtained. Information

350 obtained through this process included external spending, and various forecasts and
351 budgets, as well as, internal operating plans.

352 General organizational and operational philosophies for each Company were also
353 identified. As part of this process, potential organizational and operational approaches
354 were discussed and areas for potential savings were identified. This process resulted in
355 the development of a set of overall operating assumptions.

356 Finally, from all of the information and analyses identified above, savings
357 estimates were developed, reviewed, analyzed, and revised by the management working
358 groups, with the assistance of Booz Allen, to produce the level of estimated savings
359 reflected in the initial merger announcement. This level of savings was subsequently
360 refined with minor adjustments made to reflect revised baseline data and timing
361 assumptions.

362 **Q. WHAT WAS THE SCOPE OF THE ASSISTANCE PROVIDED BY BOOZ**
363 **ALLEN RELATED TO THE POTENTIAL COST SAVINGS ASSOCIATED**
364 **WITH THIS PROPOSED MERGER?**

365 **A.** Booz Allen was asked to assist the managements of the Companies in the identification
366 and quantification of both potential savings and additional costs necessary to realize those
367 savings associated with the merger. This assistance was provided based upon our
368 previous experience and included assistance in the identification of necessary data
369 elements and potential cost savings areas, discussion of potential organizational and
370 operational philosophies, discussion of potential assumptions to be utilized by

371 Companies, assistance in the identification and quantification of estimated savings and
372 costs-to-achieve and comparison of results to other previous transactions.

373 **Q. WERE PERSONNEL FROM THE COMPANIES INVOLVED IN THIS**
374 **PROCESS?**

375 A. Yes, a number of senior executives from both Companies were involved in the cost
376 savings identification and quantification process described above. Initially, a small
377 working group was involved in providing data to Booz Allen, confirming assumptions
378 around the operating model and evaluating the identified savings opportunities, i.e., the
379 timing and amounts of savings. After announcement, a broader senior executive and
380 middle management team was involved, representing the corporate and utility operating
381 support areas of the Companies. These executives evaluated potential savings
382 opportunities and provided guidance regarding the timing of savings realization, and in
383 some cases, provided additional data to Booz Allen for purposes of developing savings
384 estimates.

385 **Q. IS THIS PROCESS TYPICAL OF OTHER COST SAVING ESTIMATION**
386 **PROCESSES IN WHICH YOU HAVE BEEN ENGAGED ?**

387 A. Yes. The overall process undertaken by the two Companies to identify merger cost
388 savings was typical of other engagements in which I have been involved. Senior
389 executives from each company were identified to create a joint synergies team, of which
390 Booz Allen was a part. These executives had broad visibility across the organization and
391 within their respective areas of responsibility and were able to provide insights into how

392 the business operated and to how particular impacts may occur given anticipated changes
393 to the operating model.

394 In addition, a broader working group was in place to support this identification
395 and quantification process comprised of several members of middle management which
396 further increased the knowledge base available for the synergies analysis. The
397 involvement of these personnel in the pre-announcement analysis provided the requisite
398 operating insights into operations of the Companies and enabled the management groups
399 to understand and assess the identified savings prior to announcement.

400 In addition, a post-announcement refinement process was undertaken to further
401 review the initially identified synergies and to obtain additional source data given the
402 tight confidentiality limitations that existed prior to announcement of the merger. This
403 process enabled all assumptions to be validated and extended the number of involved
404 management personnel from the Companies. In addition, it allowed for deeper analysis
405 and review of the synergies areas to increase the confidence in attainment of these
406 expected amounts.

407 The combination of these involved management group members in the pre-
408 announcement process and the expansion of the management group participation post-
409 announcement, provided a sound basis for the identification and quantification of the
410 estimated merger synergies.

411 **Q. HOW WERE THE COST SAVINGS QUANTIFIED IN THIS PROCESS?**

412 A. Estimates of cost savings were developed on a nominal cost basis over a five-year period,
413 with the first beginning post-close (2007) and extending through the end of year five

414 (2011), thus providing a multi-year view of attainable savings. Since the level of savings
415 once integration is completed grows with escalation, a five-year period has been adopted
416 for presentation of the cost savings information. This five-year period is representative of
417 the level of ongoing savings and can be used as a reasonable determination of both annual
418 and cumulative savings.

419 **Q. ARE THE IDENTIFIED COST SAVINGS ONLY ATTAINABLE DURING THIS**
420 **DEFINED PERIOD?**

421 A. No. The majority of the identified savings components will generate benefits that will
422 continue indefinitely into the future. For example, potential staffing reductions associated
423 with the merger will generally continue into the future since they relate to redundant
424 functions with no need to replace these displaced positions, although future business
425 changes may require other resource additions to occur. Likewise, potential supply chain
426 benefits will continue indefinitely as the cost of materials and supplies acquisition is
427 reduced.

428 Although the cost savings estimated over the period generally will continue into
429 perpetuity, only a five-year period has been used to present these savings as this period
430 fully illustrates the ramp-up in savings realization. The estimates of cost savings are
431 presented in nominal dollars over the relevant period of the merger to recognize that these
432 savings increase annually from the ramp-up and that they will flow to customers and
433 shareholders on that basis at some future point in time.

434 **Q. WHAT METHODS WERE USED TO QUANTIFY THE INDIVIDUAL COST**
435 **SAVINGS COMPONENTS?**

- 436 A. Cost savings were developed using three principal methods of quantification:
- 437
- 438 • Direct analysis - Use of actual costs and changes to these costs based on planned
439 consolidation activities (e.g., position reductions were estimated based on detailed
440 analyses of fully aligned individual functions and positions).
 - 441 • Estimation - Determination, based upon more limited analysis of actual data, of
442 potential merger-related cost reductions considering anticipated changes to operations
443 (e.g., reduction in materials and supplies costs from enhanced strategic sourcing and
444 additional volume buying).
 - 445 • Comparison to other transactions - Utilization of expectations in other proposed
446 utility mergers as a proxy for the Companies' impacts (e.g., average insurance
447 premium reductions based on expected or realized reductions achieved by other
448 companies).

448 Of the three methods, the vast majority of the savings were quantified by using
449 direct analysis. These several methods of quantification are consistent with those utilized
450 by other utility companies in prior mergers, particularly where subsequent negotiations
451 will ensue. For example, it is well recognized that insurance premiums will be reduced
452 from a merger; however, the actual amount of the reduction will not be known until
453 negotiations with an insurance broker are finalized. Using other expected or realized
454 reduction amounts is an appropriate method for quantification pending such negotiation.

455 **Q. ARE THERE ALTERNATIVE ORGANIZATIONAL MODELS AVAILABLE TO**
456 **THE COMPANIES TO ACHIEVE THE IDENTIFIED COST SAVINGS?**

- 457 A. Yes. The Companies will have a great deal of flexibility in determining how to organize
458 the business to provide for effective performance and to maximize the level of savings
459 attained.

460 The cost savings related to identical or similar functions within the Companies
461 are, however, predicated upon achieving a level of integration that enables a common
462 model for execution between the Companies. This integration could occur in several
463 ways: within a corporate headquarters organization; an enterprise level shared services
464 entity; within an operating level shared services entity; through a functional or process
465 model across the companies; or, by a combination of integration of corporate and
466 headquarters function at the corporate level and integration of common technical support
467 services into the operating units, such as the utilities. Any of these approaches would
468 provide the Companies an opportunity to realize merger cost savings in those affected
469 areas.

470 In quantifying cost savings, it was assumed that a fully aligned and integrated
471 organizational model would be implemented, i.e., related functions would be performed
472 across the operating utilities on a common basis, regardless of where the responsible
473 resource was actually located. This approach assumes that common corporate and
474 headquarters transactional functions or activities would generally be performed in a
475 shared services entity, with common technical support functions either similarly
476 centralized, or located as required within the various operating units. While I will further
477 discuss the underlying organizational concept used in the analysis later in my testimony,
478 the Companies maintain a broad degree of discretion on how to align (i.e., centralize or
479 decentralize) the processes, activities and resources within the headquarters, support and
480 operating organizations.

481 **Q. CAN THE LEVEL OF SAVINGS ESTIMATED BY THE COMPANIES AND**
482 **REFLECTED IN YOUR TESTIMONY BE ACHIEVED?**

483 A. Yes. The process utilized by the Companies for estimating potential merger cost savings
484 was consistent with that utilized by other companies in previous merger transactions. As
485 a result, the savings levels are reasonably attainable provided that management of the
486 combined Company executes its integration plans in a manner consistent with its intent
487 and how other utilities have pursued similar opportunities.

488 **V. DETAILED COST SAVINGS DESCRIPTION**

489 **A. Summary**

490 **Q. YOU PREVIOUSLY TESTIFIED THAT APPROXIMATELY \$184 MILLION IN**
491 **NET MERGER SAVINGS HAVE BEEN QUANTIFIED BY THE COMPANIES**
492 **OVER THE FIRST FIVE YEARS POST-CLOSE. WOULD YOU IDENTIFY AND**
493 **DEFINE THE PRINCIPAL CATEGORIES OF COST SAVINGS THAT**
494 **COMPRISE THIS AMOUNT?**

495 A. Yes. As Applicants' Ex. TJF-1.2 illustrates, there are six primary categories of cost
496 savings that have been quantified. Each of these is described briefly below:

- 497 • Corporate and Headquarters Staffing - Position reductions related to redundancies in
498 staffing levels associated with corporate and administrative functions, such as finance
499 and accounting, human resources, information technology and supply chain, among
500 others.
- 501 • Utility Back-Office Staffing – Position reductions in operating support areas, such as
502 asset management, operations planning, customer billing and processing and other
503 business unit support related to redundancies in back-office staffing levels.

- 504 • Corporate and Administrative Programs - Reductions in non-labor programs and
505 expenses, such as insurance and shareholder services, resulting from economies of
506 scale and cost avoidance.
- 507 • Information Technology – Consolidation of operating environments including data
508 centers, network servers, workstations and applications, among other areas, from
509 selection of a single operating platform.
- 510 • Supply Chain – Improved strategic sourcing of materials and contract services from
511 specification standardization, vendor consolidation, rationalization of requirements
512 and, aggregation of spend for purchasing.
- 513 • Gas Supply – Integration of portfolio supply management allows for improved
514 commodity costs.

515 A. These savings categories provide for approximately \$373 million in gross cost savings,
516 before allocation between the regulated and non-regulated segments, over the five-year
517 period and continue thereafter.

518 **Q. ARE THERE ANY ITEMS THAT OFFSET MERGER SAVINGS?**

519 A. Yes. Cost savings initiatives which were already planned prior to the merger were offset
520 against the gross savings estimates because there is likely to be some overlap between
521 these initiatives and identified cost savings resulting from the merger. These ongoing or
522 future initiatives will contribute to lower total costs to customers and are estimated at \$11
523 million over the five-year period. The merger thus allows the Companies to achieve
524 additional cost savings opportunities beyond those previously identified. These stand-
525 alone savings reduce the gross merger savings because they are not merger-related
526 initiatives.

527 Additionally, the costs to achieve the merger are offset against gross savings as
528 discussed below.

529 **Q. WHAT ARE THE CATEGORIES OF AND APPROXIMATE COSTS**
530 **NECESSARY TO ACHIEVE THE SAVINGS?**

531 A. There are several categories of costs that must be incurred to achieve the identified
532 savings that are expected by the Companies. These costs reflect expenditures necessary
533 to effectuate the cost savings identified from the merger through company integration.
534 These categories of costs-to-achieve, as listed below, are further illustrated in Applicants'

535 Ex. TJF-1.3:

- 536 • Separation
- 537 • Change-in-control
- 538 • Retention
- 539 • Relocation
- 540 • System Integration
- 541 • Directors' and Officers Coverage
- 542 • Regulatory Process and Compliance
- 543 • Facilities Integration
- 544 • Internal / External Communications
- 545 • Integration Costs
- 546 • Transaction Costs

547 Estimated costs-to-achieve total approximately \$178 million, which will principally be
548 incurred in 2007 through 2010, but will extend over a multi-year period to reflect certain
549 ongoing costs.

550 **Q. WHAT IS THE ANTICIPATED LEVEL OF TOTAL COST SAVINGS AFTER**
551 **PRE-MERGER INITIATIVES SAVINGS AND COSTS TO ACHIEVE ARE**
552 **REFLECTED?**

553 A. The total estimated cost savings identified from the merger over the first five years after
554 the merger, after being adjusted for costs to achieve and pre-merger initiatives, are
555 approximately \$184 million. The annual level of steady-state savings at the end of this
556 five-year period will continue into perpetuity as related reduction decisions have been
557 fully implemented.

558 **B. General Assumptions**

559 **1. Escalation Rates**

560 **Q. WHAT ASSUMPTIONS ABOUT THE ESCALATION OF COSTS WERE**
561 **UTILIZED BY THE COMPANIES IN ESTIMATING COST SAVINGS?**

562 A. For the most part, cost savings were estimated based on 2006 budgeted expense levels. In
563 certain cases, such as supply chain, 2005 data was used because a greater level of
564 accuracy could be achieved by using actual, as opposed to budgeted, data. To account for
565 inflation appropriately, specific escalation rates were then applied, by category, to initial
566 year savings levels to determine the level of savings in each of the subsequent years.
567 These escalation rates reflected the current financial planning assumptions adopted by the
568 Companies' management and are generally consistent with those I have observed in use at
569 other similar companies. Development of the estimated cost savings over the five-year
570 period without application of an escalation factor would result in understatement of the
571 total cost savings available over this period due to the year-to-year change in baseline cost
572 levels.

573 **Q. WAS THE SAME ESCALATION RATE USED FOR ALL SAVINGS**
574 **CATEGORIES?**

575 A. No. A differential existed in the anticipated escalation rates for the cost categories
576 included in the analysis (*e.g.*, differences between salaries and other cost categories). For
577 this reason, a single escalation rate could not be used for all cost savings categories.
578 Although approximately 2.75% was used for general inflation, a higher blended rate
579 (approximately 4.5%) was used for salaries and benefits to reflect market requirements
580 and existing contractual arrangements. This 4.5% level is consistent with the Companies’
581 pre-merger, stand-alone assumptions for salary and benefit increases. This blended rate
582 reflects an escalation rate of approximately 3.5% for wages and salaries and
583 approximately 6.3% for benefits due to the continuing high rate of inflation for medical
584 costs that American industry has experienced. These escalation rates are comparable to
585 those used by other companies with which I am familiar and to other longer-term
586 estimates for general inflation.

587 **2. Treatment of Capital Savings**

588 **Q. WERE THERE OTHER GENERAL ASSUMPTIONS OR METHODOLOGIES**
589 **EMPLOYED IN THE COST SAVINGS ANALYSIS?**

590 A. Yes. In treating capital deferrals and avoidance related to the merger, such as in
591 information technology investment, it would be inappropriate to count the entire cash
592 amount of the capital expenditure deferred or avoided as cost savings. For example, if it
593 were anticipated that the Companies could avoid incurring a \$10 million system upgrade
594 in 2007, this reduction in expenditures was not used for the actual savings. Including the
595 \$10 million as savings achieved in 2007 would not represent the avoided revenue
596 requirements associated with that capital expenditure from either the company or

597 customers' perspectives. Additionally, such a methodology would result in overstating
598 the cost savings in the early years following the merger by taking credit for the entire
599 avoided investment as cost savings in those years. Instead, it is more appropriate to
600 reflect only the revenue requirements savings associated with capital deferral / avoidance
601 as cost savings. The components of revenue requirements include financing,
602 depreciation, insurance and property tax. A levelized revenue requirements approach,
603 rather than a cash flow approach, provides a more appropriate determination of the
604 savings estimated to be generated due to the merger.

605 **Q. WHAT METHODOLOGY WAS USED TO CAPTURE THESE CAPITAL**
606 **DEFERRAL/AVOIDANCE SAVINGS?**

607 A. A levelized fixed charge rate for each year following completion of the merger was
608 applied to each year's capital expenditure reductions. The fixed charge rate methodology,
609 which reflects normal declining balance ratemaking treatment, was used to estimate
610 annual savings levels. Fixed charge rates were determined for each entity and then were
611 blended to determine both general rates for long term assets and specific rates for
612 information technology-related expenditures. The levelized fixed charge rate for capital
613 items other than information technology was 15.0% while for information technology
614 items it was 32.1%, reflecting the more rapid (five year) depreciation period. These
615 estimates were based upon the amortization period of the various asset classes (long term
616 at 40 years and short term at 5 years) as well as the estimated weighted average cost of
617 capital adjusted for tax. Capital costs were based on each company's debt levels of
618 approximately 45% for Peoples Energy and approximately 33% (excluding preferred

619 stock) for WPS Resources. Debt costs were approximately 7.7% for Peoples Energy
620 companies and 5.6% for WPS Resources entities. Currently authorized costs of common
621 equity of between 11.1% and 11.3% for the Peoples Energy regulated entities and 11.0%
622 for Wisconsin Public Service Company were adopted for this analysis and then grossed-
623 up for income taxes. Each company's calculation was weighted by their spend to arrive
624 at a combined average fixed charge rate.

625 **C. Cost Savings Summary**

626 **1. Corporate and Headquarters Staffing**

627 **Q. PLEASE DISCUSS IN MORE DETAIL THE NATURE OF THE COST SAVINGS**
628 **CREATED THROUGH THE INTEGRATION OF THE CORPORATE AND**
629 **HEADQUARTERS STAFFING FUNCTIONS.**

630 A. The combined Companies expect to fully integrate existing corporate and headquarters
631 areas, such as strategic planning, treasury and compensation, among others. Such
632 integration would generate savings through the elimination of redundant positions within
633 these functions as the scope of related activities are generally identical within each
634 Company.

635 A merger between the Companies provides an opportunity to consolidate these
636 functions and eliminate redundant activities. For example, the consolidation of two
637 information technology functions would typically create significant savings. Potential
638 redundancy within the two departments is identified through an alignment of sub-
639 functions between the Companies to ensure comparability across different organizational
640 structures. Each individual sub-function within the information technology area contains

641 positions performing duplicate tasks. Overlapping positions for non-variable work
642 activity can be consolidated and subsequently eliminated without an impact on remaining
643 workload volumes.

644 **Q. HOW WAS THIS PRINCIPLE APPLIED TO DETERMINE THE POTENTIAL**
645 **POSITION SAVINGS THAT WOULD RESULT FROM A MERGER OF THE**
646 **COMPANIES?**

647 A. The first step in determining corporate and headquarters staffing savings was to develop a
648 detailed functional alignment of each Company. Each Company provided functional and
649 sub-functional breakdowns that identified each position within its respective
650 organization. The stand-alone company functional areas then were aligned, by sub-
651 function, so that position levels for similar activities performed by the respective
652 companies could be compared. The analysis maintained consistency between the inter-
653 company functional categories and aligned representative activities between the
654 Companies.

655 Upon completion of the functional and sub-functional alignment, the positions
656 necessary to perform the required activities on a merged company basis were identified.
657 In determining the appropriate going-forward future position levels of the merged
658 company, the following items were considered:

- 659 • The relevant operating model to be employed within the particular area
 - 660 i. • **The relative scale and resource concentration between the two**
 - 661 **companies**
 - 662 ii. • **The type of activity and potential for redundancy**
- 663 • The fixed or variable nature of the activity

664 Consideration of these factors provided the means by which going-forward
665 staffing levels could then be defined and resulting reductions determined.

666 **Q. WHAT OPERATIONAL MODEL WAS ASSUMED FOR DETERMINATION OF**
667 **STAFFING REDUCTIONS IN THE CORPORATE AND HEADQUARTERS**
668 **FUNCTIONS?**

669 A. Although no specific organizational structure was assumed to be in place post-closing of
670 the transaction, there was a guiding presumption that the Companies would establish an
671 operating model that would allow them to generally simplify and optimize operations,
672 thus creating an opportunity to capture available savings from alignment, standardization
673 and integration of common functions. This meant that similar functions would be fully
674 integrated, where practical, and that resources would be aligned in the most effective
675 manner to execute corporate objectives. It was intended that full organizational design
676 flexibility would be maintained by the Companies to develop an operating structure that
677 reflected the prerogatives of management and the requirements of managing and
678 executing the business.

679 At the corporate level, it was assumed that those functions that relate to managing
680 the business on an enterprise basis, e.g., strategic planning, finance and accounting,
681 external relations, etc., would be fully integrated to reflect the overlap and duplication in
682 these areas. With respect to these functions, consolidation would occur in those areas that
683 were not geographically dependent, such as investor relations, or were related to business
684 policy, such as compensation and benefits.

685 The identified staffing reductions in the corporate and headquarters areas also
686 assumed that a shared service-type entity, similar to what Peoples Energy currently has in
687 place, could also be in place after the close of the transaction. This type of entity
688 typically aligns the common and transactional elements of the various functions, such as
689 human resources, information technology, supply chain, etc., that are performed for all
690 aspects of the business to capture economies of scale. Without defining whether the
691 scope of this shared services entity could increase to incorporate other transactional
692 activities, it was assumed that this type of organization would remain in place and serve
693 as a means to achieve standardization and lower unit costs for similar activities.

694 **Q. PLEASE DESCRIBE THE RESULTS OF THE CORPORATE AND**
695 **HEADQUARTERS STAFFING ANALYSIS DISCUSSED ABOVE.**

696 A. As of June 2006, WPS Resources had a total of 778 positions in the corporate and shared
697 services areas, while Peoples Energy had a total of 490 positions at this same date for
698 these functions. Approximately 230 corporate and headquarters position reductions were
699 identified by the Companies that could result from the consolidation, which
700 constitutes 18.1 % of the combined corporate and headquarters position baseline. These
701 reductions represent the anticipated level of functional duplication that would exist
702 between the Companies and could be avoided through the creation of an integrated
703 corporate and headquarters organization. The savings associated with this area are \$20.0
704 million in the first year and grow to \$31.4 million by the third year when all information
705 technology conversion is completed and steady-state operations are achieved.

706 **2. Utility Back-Office Staffing**

707 **Q. WHAT OPERATING MODEL WAS ASSUMED FOR THE ANALYSIS OF THE**
708 **UTILITY BACK-OFFICE AREAS?**

709 A. In addition to the corporate related organization impacts, additional opportunities for
710 consolidation will be available in the back-office areas of the utilities, i.e., the non-field
711 or service delivery areas that support operations, such as system planning, asset
712 management and customer billing, among other areas.

713 Given that utility operating companies exist in multiple state jurisdictions and the
714 different approaches to organization within these companies, a common model needed to
715 be defined for consideration with respect to operations and organization. A model was
716 adopted where similar and commonly performed functions were assumed to be aligned,
717 harmonized and integrated, regardless of where they were located. This meant that work
718 could be electronically shared across the utility operating companies, where practical, so
719 that local resources could support company-wide operations efforts and reduce the total
720 level of staffing required. Thus, the total back-office staff work requirements could be
721 distributed across engineering or asset management staff located in any one of the states
722 where the new company will operate and joint standards would be in place to guide the
723 work performed. Similarly, common back-office support in areas such as operations
724 planning, budgeting and project management could also be consolidated and executed
725 from any location in support of overall utility operations.

726 Specifically in the gas distribution business, the vast majority of resources are
727 totally unaffected by the merger as the field work volumes are not reduced. Thus, there is
728 no impact to service reliability, quality or safety from the merger as no reductions in

729 staffing are expected in the field execution areas. However, for those functions that relate
730 to areas such as business unit management, engineering, gas supply planning,
731 maintenance standards and other common functions in place to support each Company's
732 network, it was assumed that these resources could be shared across the operating
733 companies and would be aligned to allow for a fully integrated operating model to be
734 employed. The adoption of this type of model does not require relocation of personnel
735 between the Companies rather, it simply enables available resources to be jointly
736 leveraged and scheduled to meet the total work requirements of the business. Under this
737 operating model there is no reduction in the level of dedicated resources of either
738 Company's field force, thus service reliability is not affected.

739 With respect to the customer service area, the Companies will evaluate whether to
740 move to a single billing platform which would enable a variety of customer care functions
741 like customer accounting, remittance processing and credit and collections to be fully
742 integrated. The consolidation of these functions would enable back-office resources to
743 also be reduced over time. The common billing platform will enable customer calls to be
744 routed among the Companies' call centers and be handled in a standard, systematic
745 manner. This will improve overall productivity and allow for the total customer
746 representative staffing base to be sized to meet the combined needs of the Companies,
747 rather than simply the sum of the two stand-alone companies.

748 In each of the operating models described above, the operations of the Companies,
749 i.e., the field crews, are unaffected with no impacts to service reliability, quality or safety.
750 In addition, there is no movement of assets or resources away from their jurisdictional

751 control and, therefore, no impact to the ability of local regulators to continue to monitor
752 operating company performance or to maintain access to responsible operating company
753 management.

754 **Q. WHAT LEVEL OF SAVINGS WAS QUANTIFIED WITH RESPECT TO**
755 **UTILITY BACK-OFFICE STAFFING?**

756 A. The baseline level of utility staffing for the WPS Resources operating utilities was 2,115
757 and for the Peoples Energy operating utilities was 1,566. The identified staffing
758 reductions in the utilities were 65 positions, which represents only 1.8% of the overall
759 staffing baseline in the utility support area. These amounts reflect reductions that arise
760 directly from adoption of the “virtual” operating model where functions are consolidated
761 and managed and executed across the operating utilities in the field support back-office
762 functions. The total level of labor savings in the utility support area was quantified at
763 \$1.7 million in the first year growing to \$4.6 million by the third year when steady-state
764 operations are achieved.

765 **Q. WHAT ARE THE ESTIMATED TOTAL POSITION REDUCTIONS FROM THE**
766 **COMBINATION OF THE OPERATING UTILITIES?**

767 A. Total position reductions are estimated at 295 or approximately 6.0% of total current
768 combined company corporate, shared services and regulated utility positions. These
769 reductions reflect the operating models discussed above and result from the ability to
770 reduce overlapping responsibilities, align related functions and activities and leverage a
771 consolidated resource base.

772 **Q. WHEN ARE THESE POSITION REDUCTIONS ASSUMED TO OCCUR?**

773 A. The Companies intend to achieve a number of these reductions, 177, by the beginning of
774 the first year following completion of the merger. Due to the need for extensive
775 integration of information systems applications that will be required in association with
776 consolidating operations of the Companies, approximately 118 reductions will not be
777 fully realized until the second year following completion of the merger. These reductions
778 have been synchronized with anticipated system completion dates to reflect the timing of
779 system cut-overs, work practice standardization and process harmonization.

780 **Q. ONCE THE POTENTIAL POSITION REDUCTIONS WERE IDENTIFIED,**
781 **HOW WERE THE POSITION REDUCTION COST SAVINGS CALCULATED?**

782 A. Average salary levels were calculated by function and then applied to the identified
783 position reductions in those respective areas. The average blended salary for the position
784 reductions identified (excluding executives) is estimated to be approximately \$77,000 in
785 2007 dollars based on the expected salary levels for the Companies, weighted by the
786 number of functional resources in each entity, and then escalated one year.

787 **Q. ARE THERE COST SAVINGS ASSOCIATED WITH POSITION REDUCTIONS**
788 **OTHER THAN SALARY EXPENSE?**

789 A. Yes. Benefit costs are also considered when determining the cost savings associated with
790 position reductions. Benefits include such items as health insurance, life insurance,
791 employee investment plans, pension expense, accruals for retirement health benefits of
792 active positions, incentives and bonuses, payroll taxes and others. A blended benefits
793 loading rate of 33.7% was used to estimate average aggregate benefits cost. This loading
794 rate reflects all the elements, including health and medical benefits and other insurance

795 (13.6%), FICA taxes (8.6%) and, pension loadings (11.5%). These rates were developed
796 using benefits costs provided by each company and weighting the average based on
797 benefits spend. The resulting total compensation (excluding executives), including
798 benefits, averaged approximately \$99,000 in 2007 dollars.

799 **Q. WAS ANY PORTION OF THESE CORPORATE, HEADQUARTERS AND**
800 **UTILITY BACK-OFFICE STAFFING SAVINGS CAPITALIZED?**

801 A. Yes. A certain portion of these expenses are capitalized rather than expensed annually,
802 reflecting their relation to the capital or construction elements of the business.
803 Capitalized amounts thus are recovered over the life of the asset to which these costs are
804 assigned. A blended capitalization rate (i.e., the percentage of the total cost reduction that
805 would have been capitalized rather than expensed) of approximately 3.2% was used based
806 on the stand-alone expectations of each company weighted by relative size.

807 **Q. WHAT TOTAL SAVINGS LEVEL WAS ESTIMATED FROM CORPORATE,**
808 **HEADQUARTERS AND UTILITY BACK-OFFICE STAFFING**
809 **CONSOLIDATION?**

810 A. Cost savings from corporate, headquarters and utility back-office staffing consolidation
811 were estimated at \$21.8 million the first year, \$33.8 million in the second year, and \$36.0
812 million in year three, when steady-state operations is achieved. Total savings for the
813 five-year period were estimated to be approximately \$171 million.

814 **Q. COULD THESE POSITION SAVINGS HAVE BEEN ACHIEVED WITHOUT**
815 **THE MERGER?**

816 A. No. The position reductions described are solely attributed to the merger. The reduction
817 opportunities arise from overlap and duplication in functional performance, rather than
818 from stand-alone initiatives unrelated to the merger. The savings discussed above are
819 triggered by the opportunity to combine functions and eliminate redundancy, not by
820 assumed improvements in operating efficiencies. Although continuous improvement
821 programs are regularly pursued, the savings identified above are not related to these
822 stand-alone initiatives. Where cost reductions planned post-2006 were identified, these
823 impacts were subsequently identified, quantified and offset against potential savings to
824 avoid double-counting potential non-merger impacts. The subject of pre-merger
825 initiatives is discussed further elsewhere in this testimony.

826 **3. Corporate And Administrative Programs**

827 **Q. WHAT COST SAVINGS CAN BE CREATED THROUGH CORPORATE** 828 **PROGRAM AND EXPENDITURE CONSOLIDATION?**

829 A. The integration of corporate and administrative functions reduces certain non-labor costs,
830 primarily through the consolidation of overlapping or duplicative programs and expenses.

831 Two examples, insurance and information systems expenses, will illustrate how
832 these savings are created through a merger:

- 833 • Insurance - Cost savings typically would be realized in the areas of property insurance
834 and excess general liability insurance, among others. On a stand-alone basis, each
835 company carries insurance (or is self-insured) in these areas independently. A larger
836 combined company will have a reduced risk profile because of its broader asset base.
837 In addition, asset concentration will be less significant due to the broader geography
838 and more diversified balance sheet, which should translate into lower rates for the
839 combined company.

840 • Information systems - Organizations must facilitate systems development and support
 841 the information processing needs of each company. Companies typically have
 842 independent plans to develop a variety of systems in the future, including parallel
 843 systems development efforts. A combination would enable the Companies to avoid
 844 incurring these duplicate capital expenditures. Additional information systems
 845 savings could result from deferred capital projects, such as server upgrades or
 846 workstation purchases. Additionally, savings could be realized from the elimination
 847 of other duplicate costs, including disaster recovery, software support, miscellaneous
 848 software and hardware, license fees, and computer maintenance.

849 **Q. WHAT ARE THE AMOUNTS, BY SPECIFIC AREA, OF THE CORPORATE**
 850 **AND ADMINISTRATIVE PROGRAM SAVINGS?**

851 A. Savings were identified and quantified over the five-year period in the following areas:

	Five-Year Total <u>(\$Millions)</u>
855 Administrative & General Overhead	\$ 10.5
856 Benefits	5.4
857 Credit Facilities	1.7
858 Directors' Fees	5.0
859 Facilities	12.8
860 Insurance	10.5
861 Professional Services	30.7
862 Shareholder Services	<u>4.0</u>
863 Total Corporate & Administrative Programs	\$80.6

864 Each of the aforementioned categories is described below.

865 **a. Administrative and General Overhead**

866 **Q. WHAT TYPES OF EXPENSES ARE INCLUDED IN ADMINISTRATIVE AND**
867 **GENERAL OVERHEAD EXPENSE AND HOW ARE THEY AFFECTED BY**
868 **THE MERGER?**

869 A. Administrative and general overhead expense includes, but is not limited to, postage
870 (other than customer billing), employee travel and education, periodicals, and office
871 supply expenses related to employee support. These costs vary with the total number of
872 positions and change as the level of employee staffing increases or decreases. As position
873 reductions are realized, the related administrative and general support expenses will be
874 reduced accordingly.

875 **Q. HOW WERE THE ESTIMATED COST SAVINGS QUANTIFIED FOR THIS**
876 **AREA?**

877 A. Miscellaneous overhead expenses were identified and divided by the total positions for
878 which they were applicable. Between the two Companies, a total blended amount of
879 approximately \$9,000 was derived for these miscellaneous overheads per employee. The
880 amount of the A&G expense per employee was then applied to the number of reduced
881 positions in the corporate and headquarters areas to derive the total level of cost savings.
882 The related merger savings were estimated at \$1.4 million in the first year, \$2.2 million in
883 the second, and growing to \$2.3 million when steady-state operations are achieved.

884 **Q. COULD THESE MISCELLANEOUS OVERHEAD EXPENSE SAVINGS BE**
885 **ACHIEVED ABSENT A MERGER?**

886 A. No. These savings are directly related to the position reductions that would result from
887 the merger.

888 **b. Benefits**

889 **Q. HOW CAN COST SAVINGS RELATED TO BENEFITS ARISE FROM THIS**
890 **MERGER?**

891 A. A. Benefits savings typically arise from two sources: the consolidation of benefits
892 plan administration and related costs and the reduction in the cost of the dollar of benefits
893 obtained. The benefits administration costs can be reduced through the alignment of plan
894 trustees and the management of multiple plans through a single administrator. Through
895 the consolidation of the benefits plan themselves, the cost of benefits can also be reduced
896 from aggregation of the plan members and the reduction in the unit cost of the benefit
897 dollar procured. This reduction in expense relates to reducing the cost of the dollar of
898 benefit procured and not the level of benefits provided, thus employee benefits are not
899 reduced in any manner. This plan consolidation would be linked to existing contract
900 expirations and the evaluation of national and regional providers from coverage, quality
901 and cost perspectives.

902 **Q. WHAT IS THE LEVEL OF BENEFITS RELATED COST SAVINGS?**

903 A. The respective benefits administrative costs paid and benefits costs incurred by the
904 Companies were reviewed to determine the opportunities for administrator and plan
905 consolidation. The benefits costs level was reduced by 0.5% to reflect additional
906 economies available upon consolidation of the programs. Additional savings opportunity
907 was also identified from moving to an integrated administrator of the plans which also
908 reflects economies of scale. The level of savings from the consolidation of the benefits

909 program is estimated at \$1.2 million in the second year growing to \$1.3 million by the
910 third year when steady-state operations is achieved. Again, this reduction does not imply
911 any reduction in benefits levels for remaining employees.

912 **Q. WOULD THESE SAVINGS IN BENEFITS BE AVAILABLE ABSENT THE**
913 **MERGER?**

914 A. No, they would not. These savings are specifically dependent on the integration of the
915 benefits plans of the Companies and would not otherwise be available to the Companies
916 without this combination being concluded.

917 **c. Credit Facilities**

918 **Q. HOW CAN COST SAVINGS RELATED TO CREDIT FACILITIES ARISE**
919 **FROM THIS MERGER?**

920 A. These savings typically arise from the ability to reduce the amount of total credit facilities
921 required for the cash flow or credit support needs of the business on a combined basis.
922 By reducing the amount of the total credit facilities in place for the Companies to reflect
923 their combined cash flow profile and credit support requirements, the associated
924 administration and facility fees on undrawn balances can be avoided.

925 **Q. WHAT IS THE LEVEL OF CREDIT FACILITIES RELATED COST SAVINGS?**

926 A. The respective credit facilities in-place by the Companies were reviewed to determine the
927 opportunities for elimination. The combination of the Companies identified
928 approximately \$2.33 billion in credit facilities from 20 financial institutions that could
929 either be combined or eliminated. The level of savings from the reduction of credit

930 facilities is estimated at \$0.33 million in the second year growing to \$0.34 million by the
931 third year when steady-state operations is achieved.

932 **Q. ARE THESE CREDIT FACILITIES SAVINGS AVAILABLE TO THE**
933 **COMPANIES WITHOUT COMPLETING THIS TRANSACTION?**

934 A. No. Absent the merger, the stand-alone credit support requirements of the Companies
935 would remain unaffected, as would the current levels of the credit facilities. Thus, it is the
936 merger that enables the reduction in the combined level of credit facilities.

937 **d. Directors' Fees**

938 **Q. HOW ARE SAVINGS IN DIRECTORS' FEES DERIVED FROM UTILITY**
939 **COMBINATIONS?**

940 A. These savings result from the reduced number of total directors for the new company
941 compared to that of WPS Resources and Peoples Energy today. The new Company will
942 have a Board of Directors numbering sixteen directors. The elimination of four board
943 members will reduce overall director fees for meetings, committee participation and
944 travel for these individuals.

945 **Q. HOW WERE COST SAVINGS ESTIMATES IN THIS CATEGORY**
946 **DEVELOPED?**

947 A. The number of directors for each company was identified along with the associated costs.
948 Based on the average fees and expenses for directors at each Company, the total savings
949 would amount to \$0.9 million per year.

950 **Q. ARE THE SAVINGS ASSOCIATED WITH DIRECTORS' FEES A DIRECT**
951 **RESULT OF THE MERGER?**

952 A. Yes. These savings are directly merger-related in that they are driven by merger-related
953 reductions in the number of board members required by the new Company when
954 compared to the existing two companies. These savings would not be achieved without
955 the merger since neither of the Companies had a need or plans to reduce the total number
956 of directors, thus this group would not have been affected on a stand-alone basis.

957 **e. Facilities**

958 **Q. WHAT SAVINGS CAN BE REALIZED THROUGH CONSOLIDATION OF**
959 **TOTAL CORPORATE FACILITIES?**

960 A. Cost savings will arise in this category from the reduction of the total square footage
961 needed to be maintained for the relevant employee base after adjustment for the reduced
962 total employee level. This expense is variable with the number of employees and reflects
963 the cost per square foot for space and related maintenance costs.

964 **Q. WHAT WAS THE MAGNITUDE OF SAVINGS ASSOCIATED WITH**
965 **FACILITIES CONSOLIDATION?**

966 A. Because the location of the staff reductions will not be known until the integration
967 process is further along, the average amount of square footage per employee for existing
968 space and cost per square foot across both principal corporate facilities was developed for
969 application against expected staff reductions. This cost per square foot was developed on
970 a blended basis i.e., a weighted average of the two facilities costs. Thus, no decision was
971 made about which facility would be most directly affected and the Companies will have
972 the ability to locate functions and personnel in whichever location best suits their need for
973 effective performance. This space would be sublet to another occupant at the prevailing

974 market rate across the available locations. Based on this approach, facilities savings were
975 estimated at \$1.7 million in the first year, ramping up to a level of \$2.7 million savings
976 by the end of the third year following the merger, when steady-state operations is
977 achieved.

978 **Q. COULD THESE SAVINGS BE ACHIEVED ABSENT A MERGER?**

979 A. No. The facilities consolidation savings are possible only as the result of the
980 consolidation of the Companies and the resulting position reductions described above. If
981 the Companies were to remain as separate corporate entities, then these savings could not
982 otherwise occur.

983 **f. Insurance**

984 **Q. PLEASE DESCRIBE THE RATIONALE OF HOW SAVINGS CAN BE**
985 **ACHIEVED IN THE AREA OF INSURANCE.**

986 A. Utilities generally require insurance coverage in the areas of property, directors' and
987 officers' liability and excess casualty. On a stand-alone basis, each company
988 independently carries insurance in these areas which it has obtained on a negotiated basis
989 from external brokers or through self-insurance. A combined company may have a
990 reduced risk profile because of its broader and more diverse asset base, which translates
991 into lower premiums. Further savings may also be attainable through the ability to carry
992 higher deductibles given the combined company's increased financial strength.

993 **Q. HOW WERE THE SAVINGS IN THE AREA OF INSURANCE QUANTIFIED IN**
994 **THIS TRANSACTION?**

995 A. Savings on insurance premiums were calculated for property coverage, directors and
996 officers coverage, fiduciary coverage and, liability coverage. These reductions were
997 derived based on review of the costs of the different components of the insurance
998 programs of the respective companies and review of experience in other mergers
999 regarding actual savings negotiated with insurance brokers. In this transaction, it is
1000 expected that the above programs will be combined and savings in the range of 20 - 40%,
1001 by category, will be available across the respective insurance program elements, e.g.,
1002 property, excess and general liability, workmens compensation, D&O liability etc. The
1003 total estimated savings for insurance is \$2.0 million in the first year and growing with
1004 escalation thereafter.

1005 **Q. COULD THE SAVINGS THAT HAVE BEEN IDENTIFIED IN THE INSURANCE**
1006 **AREA BE ACHIEVED ABSENT A MERGER?**

1007 A. No. These savings are predicated directly on the assumption that there is a single
1008 company procuring insurance coverage on the basis of the combined risk profile of that
1009 entity.

1010 **g. Professional Services**

1011 **Q. WHAT GIVES RISE TO SAVINGS IN THE AREA OF PROFESSIONAL**
1012 **SERVICES?**

1013 A. The combined company can reduce professional services activities through economies of
1014 scope, elimination of non-recurring duplicate services and increased utilization of a
1015 broader skill base. Audit costs and additional attest services (e.g., bond insurance letter,
1016 pension plan audits, stock issuance) can be reduced as a result of duplication. Similarly,

1017 legal expenditures (regulatory and corporate) and consulting expenditures can be avoided
1018 due to redundancy and duplication, and reduced by supplier rationalization and
1019 substitution of in-house resources for external services.

1020 **Q. HOW WERE SAVINGS IN THE AREA OF PROFESSIONAL SERVICES**
1021 **QUANTIFIED, AND WHAT WAS THEIR MAGNITUDE?**

1022 A. A. Expenditures, by category. e.g., accounting, legal, consulting, etc., were aligned
1023 between both companies to determine baseline professional fees. Each category was
1024 assessed based on the needs of the business, the nature of the services obtained, the level
1025 of third-party assistance obtained and the likely availability of internal resources to be
1026 deployed against these specific needs. The total savings resulting from these reductions
1027 was estimated at \$5.8 million in the first year and growing thereafter.

1028 **Q. COULD THESE SAVINGS BE ACHIEVED ABSENT A MERGER?**

1029 A. No. They can only be achieved by consolidating the use of professional services within a
1030 single company. Otherwise, there will continue to be two different sets of independent
1031 auditors, two comprehensive sets of external legal counsel and two different sets of
1032 general consultants.

1033 **h. Shareholder Services**

1034 **Q. HOW WILL THE MERGER OF THE COMPANIES IMPACT THE EXPENSES**
1035 **INCURRED FOR SHAREHOLDER SERVICES?**

1036 A. Cost savings will arise in this area with respect to both fixed and variable costs related to
1037 expenses for the annual report, annual meeting, proxy filings, securities registration and,

1038 other investor relations costs. These costs will be avoided in many cases as they are
1039 purely duplicative.

1040 **Q. HOW WERE THE SAVINGS IN THE AREA OF SHAREHOLDER SERVICES**
1041 **QUANTIFIED?**

1042 A. Costs were aligned, by category and compared to determine relative spend. These costs
1043 were also separated between fixed and variable levels and assessed across both
1044 companies. Duplicative costs, largely fixed, are reduced in following areas: annual
1045 report costs, stock transfer/registration fees and annual meeting costs; stock exchange
1046 fees and other outside services. Variable administration/postage costs, proxy services,
1047 stock transfer / registration fees and annual meeting costs were also reduced to reflect
1048 lower required costs and to reflect some overlap of investors. The total estimated savings
1049 in the area of shareholder services is approximately \$0.8 million in the first year growing
1050 with escalation thereafter.

1051 **Q. COULD THESE SAVINGS BE ACHIEVED ABSENT A MERGER?**

1052 A. No. They can only be achieved by consolidating into a single company and thereby
1053 reducing the need for stand-alone costs to be incurred in the same areas.

1054 **4. Information Technology**

1055 **Q. HOW WILL INFORMATION TECHNOLOGY SAVINGS ARISE FROM THE**
1056 **PROPOSED MERGER OF THE COMPANIES?**

1057 A. With the completion of the merger, the separate information technology operations of the
1058 Companies will be integrated which will allow the combined stand-alone operating and
1059 capital costs to be reduced. This cost reduction will occur from the standardization of the

1060 information technology architecture, rationalization of applications and planned projects
1061 and consolidation of the underlying infrastructure.

1062 **Q. WHAT AREAS ARE EXPECTED TO PROVIDE COST SAVINGS IN THE**
1063 **INFORMATION TECHNOLOGY FUNCTION?**

1064 A. Each company utilizes different systems and vendors for the principal applications areas
1065 of finance, human resources, supply chain, billing and work management. Rationalizing
1066 these individual backbone applications will provide for significant reduction in support
1067 and maintenance expenses. With WPS Resources using PeopleSoft and Peoples Energy
1068 using SAP, it is expected that the combined company will consolidate their platforms,
1069 thus reducing applications support costs and the need for continuing upgrades to the
1070 phased-out applications. Although no final decisions were made with respect to the
1071 complete inventory of applications between the companies, the merger will require that a
1072 single, common application in each area, such as work management and billing, be
1073 adopted across the business which will yield similar savings. Selecting specific
1074 applications to support the Companies going forward may result in the early termination
1075 of a particular application before it has been fully amortized.

1076 Additionally, the standardization and consolidation of the infrastructure will
1077 enable the number of data centers to be reduced, as well as the number of servers used to
1078 support network computing. It is also expected that the number of workstations and
1079 related requirements for software will be reduced as the number of employees is reduced.
1080 Similarly, rationalization of the needs of the business will result in additional savings
1081 opportunities as the networks can be integrated between the companies, expenditures for

1082 communication devices reduced and plans for cellular, paging and other communications
1083 can be combined.

1084 **Q. WHAT ARE THE COMPONENTS OF THE SAVINGS IN THE INFORMATION**
1085 **TECHNOLOGY AREA?**

1086 A. Savings that will arise in the information technology area consist of both operation and
1087 maintenance expenses and carrying costs associated with either reduced capitalization of
1088 related expense or reduced capital expenditure levels. These savings thus reflect the
1089 reduced and avoided costs from standardization, rationalization and consolidation. In
1090 addition to the SAP-PeopleSoft application decision referred to above, other applications
1091 in the areas of supply chain, human resources, work force management and customer
1092 billing will also be consolidated. This application consolidation is expected to yield
1093 approximately \$26 million in savings and \$29 million in project cost avoidance related to
1094 these applications. Data centers will also lend themselves to consolidation and enable the
1095 Companies to reduce fixed costs in this area. This facility consolidation is expected to
1096 produce approximately \$3 million in annual cost savings.

1097 Capital savings reflect that approximately 40% of identified savings will be
1098 capitalized and amount to \$1.1 million in the first year and grow to \$10.8 million by the
1099 last year of the five-year period. These savings reflect a five-year amortization of
1100 applicable costs related to development and upgrading expenditure avoidance. For the
1101 operation and maintenance related expenses, savings are \$5.8 million in the first year and
1102 grow to \$12.8 million by the end of the five-year period. The level of savings total related

1103 to information technology is estimated at \$6.8 million in the first year growing to \$23.7
1104 million in the fifth year.

1105 **Q. COULD THESE SAVINGS BE REALIZED BY THE COMPANIES WITHOUT**
1106 **THE MERGER?**

1107 A. No. There would be no opportunity to integrate the information technology infrastructure
1108 and consolidate applications in the absence of the merger. These savings, therefore,
1109 would not occur but for the merger.

1110 **5. Supply Chain**

1111 **Q. MR. FLAHERTY, PLEASE DISCUSS THE COST SAVINGS THAT CAN BE**
1112 **CREATED THROUGH THE SUPPLY CHAIN.**

1113 A. Combining companies can achieve savings through the centralization of purchasing
1114 functions related to construction, operations and maintenance. The greater purchasing
1115 power and the relative quantity of both goods and services that can be obtained as a result
1116 of the combination of companies provide additional cost savings. With respect to the
1117 purchase of goods (i.e., materials and supplies), savings can be realized in the
1118 procurement of commodity items, consumable equipment, and other equipment for gas
1119 utilities. With respect to the procurement of services, particularly contract services such
1120 as engineering, construction and maintenance related services, expenditures can be
1121 consolidated through a combination and typically contracted from larger regional sources.
1122 Cost savings are created by achieving a lower per unit cost for the service provided due to
1123 a broader contract or the repackaging of work into more attractive options to the

1124 contractor. This work package realignment and volume purchasing of service is the
1125 primary method through which service procurement savings are realized.

1126 **a. Materials and Services**

1127 **Q. WHAT ARE THE COST SAVINGS AVAILABLE FROM COMBINED**
1128 **PROCUREMENT OF MATERIALS AND SUPPLIES?**

1129 A. Procurement savings should result from larger purchasing volumes and the availability of
1130 greater purchasing power. Expected annual purchases for 2006 for gas-related items for
1131 the WPS Resources operating utilities are estimated at approximately \$25 million, while
1132 for similar units of Peoples Energy it will be approximately \$22 million. Savings
1133 represent a reduction in total materials costs from extending strategic sourcing across the
1134 broad range of operating categories. This amount was determined based on the
1135 experience of other companies, management's knowledge of vendors and potential
1136 approaches to material standardization and vendor concentration. This strategic sourcing
1137 improvement reflects permanent economies of scale through lower unit costs. Total
1138 savings in materials and supplies increase from \$1.4 million in year one to \$2.7 by the
1139 end of the five-year period.

1140 **Q. SHOULD ANY OF THESE AMOUNTS BE CAPITALIZED BY THE**
1141 **COMPANIES?**

1142 A. Yes. Approximately 60% of the materials and supplies savings have been allocated to
1143 capital accounts based on the combined Company's estimated capitalization rate for all
1144 materials and supplies. Once again, the levelized fixed charge rate was applied to convert
1145 the capital cost reductions into revenue requirement savings.

1166

b. Contract Services

Q. WHAT IS THE NATURE OF SAVINGS FROM CONTRACT SERVICES AS A RESULT OF THE MERGER AND HOW WERE THEY QUANTIFIED?

A. Similar to consolidating materials and supplies purchasing volumes, the combined Company will be able to gain economies of scale from the aggregation of related work activities and increased purchasing power with service providers. Examples of these services include certain engineering, construction and maintenance services.

The savings estimate also is dependent upon future negotiations with contractors and is similar to those estimated in prior transactions and represents purchasing power savings across the broad range of these services. The total gas-related items for the WPS Resources operating utilities for 2006 is expected to be \$54 million, while for similar units of Peoples Energy they are estimated at \$53 million. The Companies thus should be able to achieve additional economies of scale and scope from improved sourcing across all their vendors.

Some contract services savings should be considered capital savings. A capitalization rate of 18% was used to represent the level of contract services expenditures that would be assigned between O&M and capital accounts. These capital savings amounts were then converted to revenue requirements savings using the levelized fixed charge rate. The total estimated annual savings from contract services increase from \$2.9 million in the first year to \$3.6 million by the end of the five-year period.

6. Gas Supply

1167 **Q. HOW CAN COST SAVINGS BE ACHIEVED IN THE AREA OF GAS SUPPLY**
1168 **AND WHAT ARE THE ESTIMATED SAVINGS?**

1169 A. Gas supply savings may be realized as a result of combining overlapping asset positions
1170 and managing them on a portfolio basis. Savings accrue primarily from avoided capacity
1171 charges for the overlapping assets. The Companies maintain approximately 2.5 Bcf per
1172 day of system deliverability to meet peak day demands and have access to a portfolio of
1173 supply pipelines including ANR, NGPL, Northern Natural, Northern Border, Viking and
1174 others. Preliminary gas supply savings were estimated based on approaching gas
1175 purchasing requirements on a “portfolio” basis, and therefore reducing total storage
1176 requirements for the combined entity. Steady-state savings are estimated at approximately
1177 \$3.0 million in this area with the Companies to fully review the parameters and
1178 limitations of portfolio gas supply management during the integration process.

1179 **Q. COULD THESE SAVINGS BE ACHIEVED ABSENT A MERGER?**

1180 A. No. These savings are predicated directly on the integration of the gas supply
1181 requirements and managing the Companies supply positions on a portfolio basis, which
1182 would not be accomplished in the absence of the merger.

1183 **7. Savings Comparison**

1184 **Q. ARE THE CATEGORIES OF SAVINGS IN THIS MERGER CONSISTENT**
1185 **WITH THOSE TYPICALLY IDENTIFIED IN UTILITY COMBINATIONS?**

1186 A. Yes, they are. There are, however, certain factors unique to this merger that affect the
1187 nature and level of synergies available.

1188 **Q. PLEASE ELABORATE ON THESE FACTORS.**

1189 A. Several factors typically affect the nature and level of merger synergies expected in utility
1190 combinations. These include: relative size (of the Companies), relative cost position,
1191 location, business mix, organization and management philosophy. Certain of these
1192 factors affect the quantified merger synergies in this merger:

- 1193 • First, there are multiple, distinct service territories within which the WPS Resources
1194 and Peoples Energy operating utilities provide service. More proximate service
1195 territories normally would provide for additional savings opportunities e.g., reduction
1196 in facilities and sharing of relevant resources;
- 1197 • Second, Peoples Energy is a gas only utility and does not have any electric utility
1198 operations similar to that of WPS Resources, thus there is no counterpart organization
1199 and the almost 1,250 electric generation, transmission and distribution personnel of
1200 these entities would be unaffected by the merger;
- 1201 • Third, the relative scale of WPS Resources and Peoples Energy are different with
1202 WPS Resources having approximately 60% more corporate related personnel and
1203 35% more field distribution personnel relative to Peoples Energy. This scale
1204 differential will tend to depress the level of available savings, particularly when the
1205 majority of the resources are in unaffordable areas, i.e., field crews.

1206 These differences affect the alignment and comparability of the staffing levels and
1207 costs of operations. Accordingly, each of these differences needed to be considered in
1208 determining the potential level of savings opportunities available from the merger.

1209 **Q. HOW DO THE WPS RESOURCES AND PEOPLES ENERGY MERGER COST**
1210 **SAVINGS COMPARE TO THOSE IN OTHER TRANSACTIONS?**

1211 A. The anticipated cost savings from the merger of the Companies are within the range
1212 identified by other companies in other recent utility mergers. In particular, anticipated
1213 position reductions and non-fuel operations and maintenance (“O&M”) expense

1214 reductions were reviewed -- two categories that provide a useful basis for comparative
1215 assessment of relative merger-related cost savings.

1216 The approximate 6.0% position reduction amount from the merger of the
1217 Companies reflects the estimated total number of position reductions (approximately 300)
1218 compared to the total number of positions at both companies prior to the initiation of the
1219 merger (approximately 5,000 which reflects all the functions of the operating utilities in
1220 place). The 6.0% reduction amount falls below the average reduction figure of 8.3% and
1221 is limited by the lack of overlapping operations and certain operating composition
1222 differences between the Companies. In particular, none of the field workforce is affected
1223 by the combination, i.e., work volumes will not be reduced, thus those positions directly
1224 responsible for safety, reliability or service quality will not be reduced as a result of the
1225 merger. There is opportunity for consolidating certain back-office utility operations
1226 support functions; however, this does not offset the geographic distance which limits the
1227 level of potential field related reductions.

1228 Similarly, the non-fuel O&M reduction amount of 7.8% that will result from the
1229 merger is also below the 9.4% average of the same publicly announced transactions. The
1230 differences in the operating company scope explained above are the principal reasons for
1231 the disparity between the WPS Resources and Peoples Energy merger O&M cost savings
1232 and the average cost savings from other recently proposed utility mergers and would be
1233 anticipated based on the specific facts of this transaction. This result is largely driven
1234 downward by the significant amount of field related generation, transmission and
1235 distribution O&M expense in the denominator that is not affected from this merger, as

1236 compared to prior transactions. The relative scale of functions where no overlap exists,
1237 such as in electric generation, transmission and distribution, further impact the
1238 comparison in a downward manner. Although not all of the saving elements found in
1239 other prior mergers are available in this transaction the cost savings and cost avoidances
1240 related to the WPSC and Peoples combination reflect those typically found within my
1241 previous industry experience.

1242 **VI. COSTS-TO-ACHIEVE AND PRE-MERGER INITIATIVES**

1243 **Q. PLEASE DESCRIBE THE APPROACH TO ESTIMATING THE COSTS THAT**
1244 **WILL BE INCURRED WITH THE INTEGRATION OF THE TWO**
1245 **COMPANIES.**

1246 A. Costs are incurred in all merger transactions from the process of combining the two
1247 entities and attaining the identified cost savings. These costs generally reflect out-of-
1248 pocket cash payments and usually are one-time payouts incurred as a result of the merger.

1249 **Q. PLEASE EXPLAIN THE PROCESS BY WHICH THE COSTS-TO-ACHIEVE**
1250 **WERE ESTIMATED BY THE COMPANIES.**

1251 A. The cost category analysis approach described above that was used to determine potential
1252 merger savings opportunities areas was also extended to the potential out-of-pocket costs
1253 associated with realizing the savings and closing the transaction. Specific identification
1254 of employee related separation cost was undertaken to identify the various elements that
1255 could be expected to be incurred. The out-of-pocket costs that will be incurred in merger
1256 integration such as, systems integration, regulatory processes, facilities integration,
1257 communication expenses and other miscellaneous expenses also were identified. In

1258 addition, certain non-cash costs were recognized in this transaction for technology
1259 expenditures related to prior systems installation that have not been fully recovered and
1260 are reflected on the balance sheets of the Companies. The methodology used by the
1261 Companies to develop the costs-to-achieve estimates was comprehensive, and similar to
1262 that used by other companies in estimating such costs.

1263 **Q. WHAT EXPENSES ARE ESTIMATED TO BE INCURRED TO MERGE THE**
1264 **COMPANIES?**

1265 A. Costs-to-achieve, before allocation between the regulated and non-regulated segments,
1266 are estimated at \$178 million over the five-year period utilized, with the largest portion of
1267 these costs (\$148 million) to be incurred over the first three years beginning in 2006.
1268 Certain costs-to-achieve will continue into succeeding years as annual payments will be
1269 required for items such as licenses. These cost estimates are consistent with estimates
1270 made by companies in other similar prior transactions and reflect differences in scale and
1271 scope and the unique circumstances of this merger.

1272 **Q. WHAT ARE THE PRIMARY COMPONENTS OF THE COSTS-TO-ACHIEVE**
1273 **THE ESTIMATED MERGER SAVINGS?**

1274 A. The primary components used to estimate costs-to-achieve were separation costs
1275 (estimated to cost \$22.4 million), change-in-control (\$15.3 million), relocation costs (\$3.3
1276 million), retention costs (\$5.7 million), systems integration (\$82.8 million), facilities
1277 integration (\$3 million), internal and external communication expenses (\$5.5 million),
1278 regulatory process and compliance costs (\$10.5 million), integration costs (\$6.1 million),
1279 Directors' and Officers coverage (\$2.9 million), and transaction costs (\$20.5 million).

1280 **Q. PLEASE DESCRIBE THE MEANS THE COMPANIES ANTICIPATE USING TO**
1281 **ACHIEVE THE ESTIMATED POSITION REDUCTIONS.**

1282 A. A major component of the merger cost savings is the reduction in work force which is
1283 primarily due to the elimination of duplicative functions and tasks. These reductions are
1284 expected by the Companies to be achieved through a variety of means including attrition,
1285 controlled hiring, work force redeployment, work realignment, and through voluntary
1286 separation or early retirement. For these targeted separations, out-of-pocket costs will be
1287 incurred to achieve the total position reductions.

1288 **Q. HOW WAS THE LEVEL OF COSTS-TO-ACHIEVE FOR POSITION**
1289 **REDUCTIONS CALCULATED?**

1290 A. The preliminary estimate used for the severance package calculation was three weeks of
1291 base pay per year of service (assuming an average of 17 years), plus eighteen months of
1292 health benefits from the date of separation. This estimate was based on similar programs
1293 previously offered by the Companies and will be refined during the integration process to
1294 meet the needs and considerations of the Companies as they develop the overall
1295 integration strategy. The separation package was applied to average salaries in affected
1296 groups and reflects approximately one year of salary for employees. For displaced
1297 executives, standard contract arrangements were utilized based on years of service and
1298 relative compensation levels.

1299 The severance related programs that affect employees and executives are to be
1300 more fully defined during the transition process based on additional considerations of the
1301 management and human resources philosophy of the combined company and more

1302 specific analysis on the timing and location of reduced positions. Total separation costs
1303 were estimated at \$37.8 million with an additional amount of \$5.7 million for employee
1304 retention also identified to secure employees during the pre-close period for critical
1305 activities, such as in the information technology area.

1306 **Q. EXPLAIN THE NATURE OF RELOCATION COSTS.**

1307 A. To provide for efficient consolidation, certain functional areas will be centralized and
1308 thus require employee relocation to a new site. Based on the functional analysis, it was
1309 determined that a number of positions possibly would need to be relocated between the
1310 headquarters locations at an estimated cost of \$3.3 million. The full cost of the actual
1311 relocation package to be offered to eligible positions has not yet been determined, as it
1312 ultimately will depend on the number of personnel that will move. The components of a
1313 relocation program could include moving expenses, house hunting costs, cost of living
1314 differentials, and closing costs. These cost estimates are consistent with estimates made
1315 by companies in prior similar transactions.

1316 **Q. EXPLAIN HOW SYSTEMS CONSOLIDATION AND TELE-**
1317 **COMMUNICATIONS NETWORKING COSTS WERE CALCULATED.**

1318 A. Significant effort will be expended by the Companies in integrating the information
1319 technology and services functions of the Companies. A principal element of these costs
1320 will relate to integrating the diverse applications of the Companies. In addition, the
1321 voice, data and video networks will also need to be integrated through expanded
1322 telecommunications capabilities, the data centers will be consolidated and elements of
1323 the network such as servers will be rescaled to meet the needs of the business.

1324 Given the very different technology environments and back-bone applications
1325 within each company, substantial effort will be made to align platforms, rationalize
1326 vendors and reduce overlap. Particularly, the areas of consolidating enterprise resource
1327 planning (ERP) systems and moving to a common billing system will require focused
1328 attention and dedicated expenditure.

1329 Integration costs for these areas were estimated at \$82.8 million over the five-
1330 year period with some continuing costs thereafter. These cost estimates cover contract
1331 programming, hardware change out and conversion, potential T-1 capacity, and outside
1332 assistance and reflect scale, complexity, and platform differences. For example, the
1333 O&M and revenue requirements costs of applications consolidation is estimated at
1334 approximately \$81 million and data center closure at \$2 million. These costs will reflect
1335 both third-party costs for programming and conversion support, as well as, costs for
1336 changes in licensing fees and server capacity. These costs also include approximately
1337 \$30 million for early retirement of certain existing applications that will occur from
1338 consolidation of applications. These costs occur in year four, after application
1339 consolidation and conversion have occurred and reflect the remaining unamortized
1340 development and installation costs that would have been amortized over future years.

1341 These expenses associated with systems and communications integration are
1342 expected to principally be incurred in 2007 and 2008, but will carry through the full
1343 period to reflect additional hardware lease costs and licenses.

1344 **Q. CAN YOU DESCRIBE THE REGULATORY PROCESS AND COMPLIANCE**
1345 **COSTS-TO-ACHIEVE RELATED TO THE MERGER?**

1346 A. To successfully complete the merger, certain costs will be incurred for preparation and
1347 pursuit of regulatory filings, such as those related to the Securities and Exchange
1348 Commission, the Federal Energy Regulatory Commission, and the Department of Justice
1349 filings and the merger related cases before the various state regulatory jurisdictions. In
1350 addition, certain costs were incurred to satisfy expanded compliance and fiduciary
1351 requirements, such as in due diligence. These costs will include professional services for
1352 legal, tax, accounting and consulting assistance, including legal and other consulting fees
1353 incurred in negotiating the Merger Agreement, and certain other filing related costs and
1354 fees. Regulatory process and compliance costs are estimated at \$10.5 million.

1355 **Q. PLEASE DESCRIBE THE ESTIMATED INTERNAL AND EXTERNAL**
1356 **COMMUNICATIONS COSTS-TO-ACHIEVE.**

1357 A. Communication expenses will arise from the need to disseminate merger information to
1358 the various stakeholders of the individual organizations and combined company.
1359 Informational releases, brochures, notices, etc. will be sent to employees, shareholders,
1360 rating agencies, and state and federal commissions to explain the specifics of the merger.
1361 The various vendors, supplier and contractors will also receive communications that
1362 address the merger and the manner in which contacts and business arrangements will be
1363 conducted. Additional costs will be incurred with respect to changing related
1364 infrastructure elements such as signage. These expenditures are estimated to total \$5.5
1365 million.

1366 **Q. WHAT IS THE NATURE OF THE INTEGRATION COSTS TO ACHIEVE?**

1367 A. These costs capture the out-of-pocket travel costs of internal employees groups in
1368 accomplishing the integration and relate to air, lodging and per diem expense. Additional
1369 support costs from third-parties for consulting assistance through this process are also
1370 reflected in this category. These costs are estimated at \$6.1 million.

1371 **Q. PLEASE DESCRIBE THE DIRECTOR AND OFFICERS COVERAGE.**

1372 A. With separation from the Companies, an ongoing level of insurance expense will be
1373 incurred on behalf of the departing directors and officers. This expense is provided for in
1374 the Merger Agreement (attached as Attachment A to the Application) to provide adequate
1375 coverage to these individuals in the event of subsequent litigation to which they could
1376 become a party in view of their previous position with the Companies. These amounts
1377 have been estimated at \$2.9 million and reflect a one-time premium incurrence.

1378 **Q. WHAT TYPE OF FACILITIES COSTS WILL BE INCURRED WITH RESPECT**
1379 **TO THE TRANSACTION?**

1380 A. The reduction in total staffing will free-up a certain amount of square footage currently
1381 utilized by the Companies. These incurred costs relate to the restacking of floor space to
1382 accommodate a different amount of total employees, by location, and cover related
1383 moves, refurbishment, construction and other leasehold improvements. These costs have
1384 been estimated at \$3 million to realign the separate corporate facilities maintained by the
1385 Companies.

1386 **Q. PLEASE EXPLAIN THE TRANSACTION COST COMPONENT INCLUDED**
1387 **WITHIN THE TOTAL COSTS-TO-ACHIEVE.**

1388 A. Transaction costs include amounts paid to the investment banks for assistance with
1389 certain aspects of the merger. These costs specifically relate to fees paid for assistance in
1390 transaction structuring and negotiation and the provision of a fairness opinion to satisfy
1391 the needs of the Boards of Directors. Total transaction fees are estimated at \$20.5 million
1392 for the above categories.

1393 **Q. PLEASE DESCRIBE THE APPROACH USED TO QUANTIFY THE PRE-**
1394 **MERGER INITIATIVES OVERLAP ADJUSTMENT**

1395 A. Discussions with management led to the identification of cost reduction initiatives within
1396 Peoples Energy that needed to be recognized to avoid double-counting in the synergies
1397 estimation process. The Peoples Energy cost reduction initiatives are based on holding
1398 O&M levels constant for the upcoming five year period, although the operating areas
1399 where such costs would be constrained have not yet been specified. These implied cost
1400 constraint and reductions could be achieved in a variety of means, such as through process
1401 improvement, reengineering, outsourcing, work elimination or contractor management To
1402 avoid potential duplication between the merger-related savings and Peoples Energy's cost
1403 reduction initiative savings, I reduced the total merger-related savings to reflect any
1404 potential overlap with potential Peoples Energy cost reduction initiatives. Although WPS
1405 Resources is continuously working to control costs, no adjustments for specific initiatives
1406 were identified to avoid potential double-counting of these programs with respect to the
1407 identified merger cost savings. The resulting potential overlap in cost savings are
1408 estimated at approximately \$9 million in 2007 growing to \$48 million by the end of the
1409 five year period.

1410 **Q. HOW WAS THIS IMPACT RELATED TO THE MERGER SAVINGS?**

1411 A. Total estimated O&M savings in year five are \$72 million, or 7.8% of the forecasted year
1412 five O&M. This amount was assumed to apply across the various operating entities that
1413 contributed to the overall savings on a weighted basis reflecting their relative cost levels.
1414 Accordingly, the total cost savings were reduced to reflect the assumption that some of
1415 the planned cost reductions of Peoples Energy would affect the starting cost baseline for
1416 the synergies analysis. In effect, the planned cost reduction initiative of Peoples Energy is
1417 assumed to overlap at the same level as the identified merger savings affect the initial
1418 baseline. This reflects the fact that the planned cost reduction of Peoples Energy applied
1419 to a broader cost base than was affected by the merger. As a result of this calculation, I
1420 assumed that there would be overlap between the merger-related savings and People's
1421 initiatives in proportion to the merger savings impact on the total cost baseline, or \$0.7
1422 million in the first year and growing to roughly \$3.8 million by the last year of the
1423 quantification period.

1424 **Q. WHAT IS THE RESULTING PRE-MERGER INITIATIVES ADJUSTMENT?**

1425 A. Based on the approach described above, I have adjusted the five year merger savings
1426 downward by \$11 million over five years to reflect the estimated overlap between the
1427 merger savings and Peoples Energy's stand-alone planned cost reduction.

1428 **VII. ALLOCATION OF COST SAVINGS AND COSTS-TO-ACHIEVE**

1429 **Q. WHAT IS THE GENERAL PURPOSE OF ALLOCATING COST SAVINGS AND**
1430 **COSTS-TO-ACHIEVE?**

1431 A. In any multi-jurisdictional merger the allocation of savings and costs-to-achieve is
1432 required to assign savings and costs-to-achieve to specific jurisdictions. Additionally,
1433 there are elements of the corporate and regulated savings and costs-to-achieve that
1434 support both regulated and non-regulated business operations. A properly developed
1435 allocation approach enables the savings and costs-to-achieve to be assigned in a
1436 transparent manner to those different business types.

1437 **Q. WERE THERE SPECIFIC ADDITIONAL OBJECTIVES THAT WERE**
1438 **CONSIDERED DURING THE DEVELOPMENT OF THE ALLOCATION**
1439 **APPROACH FOR THE WPS RESOURCES – PEOPLES ENERGY MERGER?**

1440 A. Yes. There were two primary objectives that the allocation approach needed to satisfy.
1441 First, the approach needed to be flexible enough to properly address over 25 different
1442 categories of savings and costs-to-achieve. Second, the allocation approach needed to be
1443 comprehensive. This is critical since savings and costs-to-achieve categories could
1444 impact regulated and non-regulated businesses, the gas and electric businesses and each
1445 jurisdiction that the operating companies will serve.

1446 **Q. IS THE ALLOCATION APPROACH DESCRIBED INTENDED TO BE USED AS**
1447 **PART OF ANY FUTURE COST-OF-SERVICE FILING?**

1448 A. No. A more detailed method that would provide a fair basis for allocation of ongoing
1449 total O&M will be developed by the Companies. The allocation approach developed for
1450 this proceeding is only intended to provide a fair basis for allocation of savings and costs
1451 for purposes of estimating savings distribution in this proceeding, and is not intended to
1452 be a permanent basis for allocations.

1453 **Q. WHAT FACTORS WERE CONSIDERED DURING THE DEVELOPMENT OF**
1454 **THE ALLOCATION APPROACH?**

1455 A. The process used to develop the allocations began with developing an understanding of
1456 how the Companies currently allocate costs. The current allocation bases covered a broad
1457 set of approaches including one, two and three factor formulas with factors including
1458 payroll, assets, and direct billing.

1459 Another key consideration used to develop the allocation approach was how costs
1460 are incurred in the merger-affected areas. This is important in that the respective
1461 allocation approaches and factors are not well-aligned. To address this, an understanding
1462 of how costs were incurred was first necessary to be developed. This allowed me to
1463 bridge differences in allocation approach and factors between the Companies in a manner
1464 that is consistent with how the costs are incurred.

1465 After gathering the allocation bases for each entity, I reviewed the different
1466 allocation approaches and factors utilized to understand where the approaches and factors
1467 were similar and where they varied. I also mapped the savings and costs-to-achieve
1468 categories to the allocation methods currently being employed. However, since different
1469 approaches were utilized by the Companies, this activity simply was undertaken to
1470 compare allocation bases.

1471 The final consideration used in developing an allocation approach for the
1472 corporate and regulated savings and costs-to-achieve was to determine how different
1473 categories of savings impact the regulated and non-regulated segments of the business.
1474 For example, savings related to utility staffing do not impact the non-regulated businesses

1475 and, thus should not contribute to non-regulated savings. Conversely, savings associated
1476 with director's fees should be allocated across the regulated and non-regulated businesses
1477 since the Companies' directors have governance responsibilities for the overall enterprise.

1478 **Q. PLEASE DESCRIBE THE PROPOSED ALLOCATION APPROACH.**

1479 A. The proposed allocation approach is based on using four-levels of allocation factors. The
1480 first level of allocation factors determine the split of related corporate and headquarters
1481 savings between regulated and non-regulated operations. As stated earlier, savings and
1482 costs-to-achieve that only impact regulated operations are 100% directed to the regulated
1483 businesses.

1484 The second level allocation factors are used to allocate the remaining regulated
1485 savings and costs-to-achieve between the electric and gas utility segments. While some
1486 of the savings only impact gas operations (e.g., utility staffing and gas supply), many of
1487 the savings categories are corporate in nature and provide benefits to all regulated
1488 operations, including electric operations.

1489 The third level allocation factors are used to assign both gas and electric savings
1490 and costs-to-achieve from level two to the state jurisdictions. Since gas and electric
1491 operations vary by jurisdiction, some savings and costs-to-achieve are only allocated to
1492 selected jurisdictions. For example, only Michigan and Wisconsin contain electric
1493 operations so savings that are allocated to electric operations are only assigned to those
1494 jurisdictions.

1495 The fourth level allocation factors are used to assign state level allocated savings
1496 and costs to achieve from Illinois to Peoples Gas Light and Coke and North Shore Gas

1497 Company. These allocations are required to match benefits with specific customer groups
1498 within Illinois.

1499 **Q. IS IT APPROPRIATE TO ALLOCATE PORTIONS OF THE REGULATED AND**
1500 **CORPORATE SAVINGS TO THE NON-REGULATED BUSINESSES?**

1501 A. Yes. Savings are available from the corporate areas that support the two companies'
1502 overall and individual businesses. These costs are incurred centrally on behalf of all
1503 business elements and are subsequently allocated out to the business segments. Post-
1504 closing of the merger, the level of allocations from the corporate areas will go down since
1505 they will be reduced in scale and, thus, additional savings to the non-regulated business
1506 will be created.

1507 **Q. SINCE THE MERGER SAVINGS DO NOT INCLUDE ANY OVERLAPPING**
1508 **ELECTRIC UTILITY OPERATIONS, IS IT APPROPRIATE TO ALLOCATE**
1509 **ANY SAVINGS OR COSTS-TO-ACHIEVE TO THE ELECTRIC OPERATING**
1510 **SEGMENTS?**

1511 A. Yes. The rationale is similar to the allocation of corporate and regulated savings to non-
1512 regulated businesses. Since savings are available from the corporate areas that support
1513 the two companies' overall operations, including electric and gas utility operations,
1514 savings should accrue to both the electric and gas operating units.

1515 **Q. WHAT ALLOCATION FACTORS WERE UTILIZED?**

1516 A. The allocation factors savings categories are shown in Table 2, and the allocation factors
1517 for costs-to-achieve categories are shown in Table 3.

TABLE 2: Savings Allocation Factors

Pre Merger Initiatives				
Utility	Reg.			Net PPE and Customer

1520 **Q. WHAT WAS THE RESULT OF THIS ALLOCATION APPROACH?**

1521 **A.** This approach led to a series of percentages that allowed the allocation of total savings
 1522 and costs-to-achieve to the regulated and unregulated segments, gas and electric, each of
 1523 the states and the state of Illinois operations. Table 4 shows the resultant savings
 1524 allocation percentages for each of the four allocation levels.

1525 **TABLE 4: Savings Allocation Factors**

Categories	Level I Reg. vs. Non-Reg.	Level II Gas vs. Electric	Level III Illinois	Level IV PGLC	Level IV NSG
Staffing					
Corporate	87.48%	55.04%	70.34%	87.84%	12.16%
Utility	100.00%	100.00%	63.60%	86.22%	13.78%
Corporate					
Administrative and General Overhead	87.48%	55.04%	70.34%	87.84%	12.16%
Benefits	86.75%	49.78%	71.51%	89.04%	10.96%
Credit Facilities	82.42%	49.76%	61.79%	86.99%	13.01%
Directors' Fees	88.21%	60.30%	69.17%	86.67%	13.33%
Facilities	86.75%	49.78%	71.51%	89.04%	10.96%
Insurance	88.21%	60.30%	69.17%	86.67%	13.33%
Professional Services	87.48%	55.04%	70.34%	87.84%	12.16%
Shareholder Services	88.21%	60.30%	69.17%	86.67%	13.33%
Information Technology					
Information Technology (Reg.)	100.00%	55.04%	70.34%	87.84%	12.16%
Information Technology (Corporate)	87.48%	55.04%	70.34%	87.84%	12.16%
Supply Chain (Gas Only)					
Contract Services	100.00%	60.30%	69.17%	86.67%	13.33%
Materials & Supplies	100.00%	60.30%	69.17%	86.67%	13.33%
Fuel					
Gas Supply	100.00%	100.00%	57.49%	82.50%	17.50%

The net savings distribution is derived by multiplying the percentages across the table for each category (i.e., for corporate staffing the calculation for Peoples Gas = 87.48% x 55.04% x 70.34% x 87.84% = 29.7% of total corporate staffing savings)

Additionally, the same approach led to a similar set of percentages for each of the cost-to-achieve categories as illustrated in Table 5 below.

TABLE 5: Costs-to-Achieve Allocation Factors

Categories	Level I Reg. vs. Non- Reg.	Level II Gas vs. Electric	Level III Illinois	Level IV PGLC	Level IV NSG
Cost to Achieve					
Separation Costs	86.75%	49.78%	71.51%	89.04%	10.96%
Retention Costs	86.75%	49.78%	71.51%	89.04%	10.96%
Relocation Costs	86.75%	49.78%	71.51%	89.04%	10.96%
System integration Costs	87.48%	55.04%	70.34%	87.84%	12.16%
Directors & Officers Liability Tail Coverage	88.21%	60.30%	69.17%	86.67%	13.33%
Regulatory Process Costs	82.42%	49.76%	61.79%	86.99%	13.01%
Facilities Integration	86.75%	49.78%	71.51%	89.04%	10.96%
Internal / External Communications	87.48%	62.51%	66.62%	87.95%	12.05%
Integration Costs	87.48%	62.51%	66.62%	87.95%	12.05%
Transaction Costs	87.48%	68.87%	64.17%	87.56%	12.45%
Pre-Merger Initiatives					
Utility	100.00%	68.87%	64.17%	87.56%	12.45%

The jurisdictional split of allocable savings is shown in Table 6 and a summary of the results of the allocation of costs savings and costs-to-achieve to the respective jurisdictions, particularly to Illinois, can be found in Applicants' Ex. TJF-1.4, TJF-1.5 and TJF-1.6.

1544

TABLE 6: Net Corporate and Regulated Allocation Results – Five Year View

Jurisdiction	Gross Savings (\$ millions)	Costs-to-Achieve And Pre-Merger Initiatives (\$ millions)	Net Savings (\$ millions)
Illinois	\$141	(\$64)	\$77
Michigan	\$23	(\$11)	\$12
Minnesota	\$14	(\$6)	\$8
Wisconsin	\$164	(\$84)	\$80
Non-Regulated	\$31	(\$24)	\$7
Total	\$373	(\$189)	\$184
Operating Utility Allocation			
PGLC	\$123	(\$56)	\$67
NSG	\$18	(\$8)	\$10

1545

VIII. CONCLUSION

1546

Q. BASED UPON YOUR EXPERIENCE ARE THE SAVINGS IDENTIFIED BY THE COMPANIES ATTAINABLE ?

1547

1548

A. Yes. Based upon my experience with other mergers and upon my interaction with executives and middle management at both Companies the methodology used to estimate potential savings is consistent with that usually adopted by other companies in similar situations. The cost savings and costs-to-achieve that have been identified are reasonably attainable provided that the management of the companies integrate operations in a manner consistent with their plans and with similar processes used by other companies in similar transactions.

1549

1550

1551

1552

1553

1554

1555

Q. DOES THIS CONCLUDE YOUR PREPARED DIRECT TESTIMONY?

1556

A. Yes, it does.

SUMMARY OF REGULATED UTILITY EXPERIENCE

Alaska Public Utilities Commission

- Anchorage Sewer Utility

Arizona Corporation Commission

- U S WEST Communications - Docket No. E-1051-88-146

Arkansas Public Service Commission

- FPL Group, Entergy Corporation, WCB Holding Corp. and Entergy Arkansas, Inc. – Docket No. 00-329U

Beaumont, Texas

- Entex, Inc.
- Gulf States Utilities Company

California Public Utilities Commission

- The Washington Water Power Company and Sierra Pacific Power Company - Application No. 94-08-043
- Pacific Enterprises and ENOVA Corporation - Application No. A-96-10-038

Clark County

- Washington Public Power Supply

District of Columbia, Public Service Commissions

- Baltimore Gas and Electric Company and Potomac Electric Power Company - Formal Case No. 951

Colorado Public Utilities Commission

- Public Service Company of Colorado and Southwestern Public Service Company - Docket No. 95A-513EG

Delaware Public Service Commission

- Atlantic City Electric Company and Delmarva Power & Light Company - Docket No. 97-65

Federal Energy Regulatory Commission

- Baltimore Gas and Electric Company and Potomac Electric Power Company - Docket No. EC96-10-000
- IES Utilities Inc., Interstate Power Company, Wisconsin Power & Light Company, South Beloit Water, Gas & Electric Company, Heartland Energy Services and Industrial Energy Applications, Inc. - Docket No. EC96-13-000
- Trans-Alaska Pipeline System - Docket No. OR78-1
