

2008 Illinois Commercial New Construction Program

A variety of financial incentives is available to builders, architects and customers when designing with energy efficiency in mind.

MidAmerican's EnergyAdvantage® Commercial New Construction program provides financial incentives to help building developers and owners get their new or renovation building projects started right by optimizing energy efficiency strategies now, before construction begins.

Get your building off to the right start during design and construction

In addition to lowering building operating costs, the Commercial New Construction program adds significant investment value in the form of state-of-the-art, reliable and cost-effective building operating systems. To get these results, MidAmerican provides developers and owners and their design teams with energy design assistance services to study and test energy efficiency strategies. And the best part – MidAmerican's energy design services are available at no cost to developers and owners.

PROGRAM REQUIREMENTS

All proposed new commercial buildings and building renovation projects are eligible for program incentives where MidAmerican delivers electricity and/or natural gas in its **Illinois** service territory and where MidAmerican accepts building projects after June 1, 2008, but before or at the onset of project design development.

Proposed new commercial buildings or building renovation projects that are not enrolled in the Commercial New Construction program are eligible for EnergyAdvantage incentives through MidAmerican's other nonresidential EnergyAdvantage programs: Heating and Cooling Equipment program; Lighting Equipment program; Motors and VSD program and Custom Systems program. Visit our Web site at www.midamericanenergy.com/illinois_business or call 800-292-6448 for information about these programs.

ENERGY DESIGN PHASE

Participation in the MidAmerican Commercial New Construction program is as easy as following these five steps.

1. The design team or owner submits a Screening Form to pre-qualify the project. This should be done as early in the design process as possible. (A Screening Form is included as part of this brochure for your convenience.)
2. MidAmerican screens the project to verify that the project meets program guidelines.
3. If the project is accepted, MidAmerican's energy design consultant facilitates a series of energy design assistance meetings with the design team that will develop optional energy-conservation strategies and the estimated incremental costs of each strategy.
4. The energy design consultant provides a final energy design report to the owner and design team, describing implementation, energy savings and simple paybacks for the strategies.
5. The building owner and design team choose those strategies that will be incorporated into construction.

TYPES OF BUILDING SYSTEMS ANALYZED IN THE DESIGN PROCESS INCLUDE THE FOLLOWING.

- Glazing systems
- Window layouts
- Daylighting controls
- Envelope systems
- Lighting controls and lighting designs
- Heating and cooling plant systems
- Load-responsive fan and pump motor controls
- Outside air control systems

DESIGN INCENTIVES

MidAmerican contracts with an independent energy design consultant to facilitate design team deliberations of various energy-saving strategies. MidAmerican also will pay a design team participation incentive fee to offset all or most of the design team members' expenses associated with working with our consultant. The design team participation incentive fee is based on square footage as shown in the table to the right.

There is no requirement to keep extensive time and materials records. The design team simply submits completed construction documents to MidAmerican's energy design consultant and then invoices MidAmerican for the design team fee. Upon receipt of the design team invoice, MidAmerican will send the incentive payment to the designated design team lead for distribution among the team participants.

DESIGN TEAM PARTICIPATION INCENTIVES

BUILDING SIZE (s.f.)	DESIGN TEAM INCENTIVE
< 5,000	\$2,000
10,000	\$2,400
20,000	\$2,900
30,000	\$3,300
40,000	\$3,800
50,000	\$6,000
100,000	\$7,000
150,000	\$8,000
200,000	\$9,000
250,000	\$10,000
300,000	\$11,000
350,000	\$12,000
400,000	\$13,000

CONSTRUCTION PHASE

For projects 50,000 square feet or larger, MidAmerican's energy design consultant will review the final construction documents to locate the energy design strategies the owner selected. A Construction Documents Report will identify the percent of achievement of the energy efficiency goal. The report gives the owner opportunity to make adjustments to the construction documents for energy strategies that were inadvertently omitted. In some instances, the owner may confirm originally selected strategies are no longer desired. This may result in a lower construction incentive than originally projected during the energy design phase.

For projects less than 50,000 square feet, construction documents reviews are not performed. Instead, MidAmerican provides a list of design requirements necessary to achieve the energy efficiency goal and the full incentive.

After completion of construction and building occupancy, MidAmerican's consultant provides a final Verification Report.

CONSTRUCTION INCENTIVES

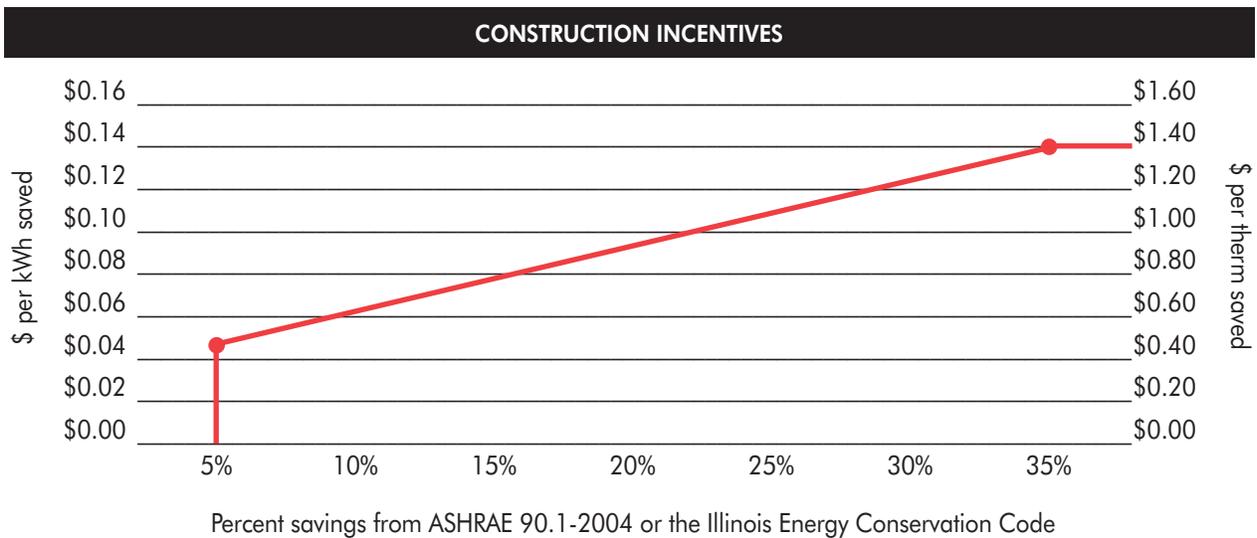

Construction incentives are paid to the building owner based on the electric and gas savings modeled and verified as installed by MidAmerican. A minimum energy savings of 5 percent better than ASHRAE 90.1-2004 or the Illinois Energy Conservation Code are required for construction incentives to be awarded. Incentives are paid to the owner/developer upon receipt of the final energy verification report.

Construction incentives range from 5 cents per kilowatt-hour saved up to 14 cents per kilowatt-hour saved as illustrated in the Construction Incentives chart below. The program also includes construction incentives for natural gas energy conservation. Construction incentives are structured to help buy down the payback for the higher investment in high-efficiency strategies. However, incentives may not lower the simple payback of a project's incremental cost below a one-year payback. For projects with long payback periods, the construction incentive formula may not

reduce the incremental cost to one year. Additional financial incentives may be available for commercial buildings designed for occupancy by tenants not related or affiliated to the building's ownership.

QUESTIONS?

To see if your next commercial development qualifies for MidAmerican's Commercial New Construction program, call MidAmerican at 800-292-6448.

DISCLAIMER: MidAmerican does not guarantee that installation and operation of energy-efficient equipment will result in reduced usage or in cost savings. The manner in which a customer uses and maintains energy-efficient equipment affects potential cost savings. MidAmerican makes no warranties, expressed or implied, with respect to any equipment purchased or installed, including, but not limited to, any warranty of merchantability or fitness for a particular purpose. In no event shall MidAmerican be held liable for any incidental or consequential damages or injuries resulting from defective equipment or installation. MidAmerican reserves the right to cancel or change these programs at any time. MidAmerican's acceptance of this application does not guarantee payment of rebate.
