Subject: Citation Oil- 1500 mva transformer installation for New Gas Plant - Green St Rd and Hoots Chapel Rd NE of Centralia

Conrad,

I have looked further into the territory issue between AmerenIP and Tri-County Electric as requested.

The information faxed to me by Clyde Finch on Monday indicates that they plan to construct a new Gas Processing plant on the North Side of Green Street Road and the east side of Hoots Chapel Rd- This location is across the road from their office building which is currently fed by Tri-County Electric Co-op out of Mt. Vernon.

By my estimation this is Raccoon Twp of Marion County Township 1 N and Range 2 E. and is in the NE corner of section 5 of that twp.

Clyde indicated that they would be requesting a 1500 kva transformer but the actual demand would only be approx 750 kw at peak plant operation.

I have checked the boundary maps and find that all of section 5 and the East half of section 6 of Raccoon Twp is Tri - County territory both for the under 1500 kw loads and the over 1500 kw loads.

I advised Clyde that he would need to request service from Tri-County because the plant will be located in their territory- He said that tri-county had said the same thing but he had called to make sure that was the opinion of AmerenIP because he preferred to be served by Ameren IP.

He asked if they could run their own line from their substation that we feed in the vicinity and bypass Tri-County. I told him I could not authorize that and that he would have to ask Tri-County about allowing that to happen.

Clyde Finch can be reached at
CITATION OIL & GAS CORPORATION
3501 South Lakeside Dr.
Oklahoma, City OK 73179

Conrad,

This was the original note- nothing has changed- I told Clyde again that if he wanted to feed their new load from their existing distribution and bypass Tri-County he would have to make sure that arrangement was ok with Tri-county.

He faxed me the load breakdown today and I told him I would make sure the load addition would not overload our substation transformer and get back to him.

He had some questions about rates so I referred him your direction.

Mike t.

Conrad,

I tried to call you phone but the message said it was being checked for trouble just now.

In order to be more definite on how far he needs to move the plant to get into our territory I would need them to send me a marked up page from the plat book that indicates exactly where the plant is planned.

He sent me a rough sketch with no measurements that showed which side of the road this was on and I put that together with the information that I have in the plat book that indicates what property they own in Raccoon Twp to make the determination that it was in Tri- County Territory.

thanks

I received the location info from Clyde at the end of last week.

He said the new plant would be in the SE ¼ of the NE ¼ of Section 6 of Raccoon Twp- This confirms for me that the location I had been looking at is the right location and also that they would have to move the plant approx. ¼ mile to the north for it to be in Ameren IP territory at the current load level they are projecting (under 1500 kw) .

Can you pass this along to Clyde ? I would be glad to meet him or a representative out there if they want to explore this further. thanks

Subject: Citation; fyl

Mike and I spoke with Clyde Finch of Citation a few minutes ago to review our position on the proposed 800 kW load to be located in Tri-County Territory. We advised:

- 1) Tri-County has the right to serve this load.
- 2) If Citation extends their distribution lines (supplied from AmerenIP's point of delivery) to the new load it would violate our agreement with Tri-County. AmerenIP would not support this arrangement (could go as far as having a cease and assist order issue to prevent Citation from installing the line).
- 3) Citation needs to contact Tri-County to discuss options.

Citation is investigating the cost associated with extending their distribution lines. If the cost to extend the distribution lines is sufficiently high, they may drop the idea of supplying the new load from their distribution.

Subject: Citation, plan to build new 750 KVA gas plant in Tri-County territory

Jeff Lewis and Ed Pearson, of Citation, called to review AmerenIP's position on electric service to the gas plant. Previously we advised Citation that the gas plant site is in Tri-County territory and AmerenIP has no right to serve the load. Service request would need to be submitted to Tri-County.

Citation wants to serve the gas plant from AmerenIP's existing SC24 service by extending their distribution lines across the Tri-County - AmerenIP boundary. Advised Jeff that we would not allow this unless Tri-County agreed to the arrangement.

Jeff indicated the project would go forward only if Citation could supply the plant from the AmerenIP existing service. Apparently Tri-County's rates are almost double AmerenIP's SC24. Jeff and Ed were made aware of pending post 2006 rate redesign.

Citation has a meeting scheduled with Tri-County tomorrow. They wanted to meet with AmerenIP prior to the Tri-County meeting to confirm our position. With Mike on vacation, I told them a meeting with us would not be possible.

After some discussion, we came to conclusion that meeting with AmerenIP at this time is not as important as meeting with Tri-County and getting their input. Jeff did not know if Tri-County was aware of Citation's desire to extend their lines across the boundary. Tri-County may still be viewing this as a request for a new point of delivery. The impact that electric price will have on the project's viability may also be important to Tri-County.

Jeff wanted to know what steps Citation could take if Tri-County does not agree to allow extension of Citation's lines into Tri-County's territory. Believe this could go the Illinois Commerce Commission.

Jeff will advise of the outcome of their meeting with Tri-County.
