

**ICC Docket No. 10-0467**

**Commonwealth Edison Company's Response to  
Illinois Commerce Commission ("STAFF") Data Requests**

**PR 11.01 – 11.10**

**Date Received: October 15, 2010**

**Date Served: October 28, 2010**

**REQUEST NO. PR 11.02:**

Referring to the Direct Testimony of ComEd witness Donovan, ComEd Ex. 19. Revised, lines 272-274, which states "With switching at any level ... ComEd still will have the same responsibility of calculating delivery service charges for all customer bills, including those customers taking supply from a RES."

- a) Is it Mr. Donovan's position that ComEd will also still have the same responsibility for calculating supply service charges for all customer bills regardless of the level of switching?
- b) If the answer to (a) is no, how will ComEd's cost associated with calculating supply service charges change if ComEd experienced 10% switching?
- c) If the answer to (a) is no, how will ComEd's cost associated with calculating supply service charges change if ComEd experienced 100% switching?
- d) If the answer to (a) is yes, why will ComEd still have responsibility for calculating supply service charges if there was 100% switching?
- e) If the answer to (a) is yes, why will ComEd still have any cost associated with calculating supply service charges if there was 100% switching?

**RESPONSE:**

- a) Yes. Regardless of the switching level ComEd remains responsible for calculating supply service charges for customers that have not chosen an alternate supplier and must retain the ability to calculate these charges for each customer who has chosen an alternate supplier.
- b) Not applicable
- c) Not applicable
- d) ComEd understands that this subpart means to ask about 10% switching and not 100% switching. With that understanding, ComEd responds as follows: ComEd must retain the responsibility of calculating supply at 10% switching because ComEd remains responsible for calculating supply service charges for customers that have not chosen an alternate supplier and as with 100% switching ComEd retains the responsibility of providing default supply service for all customers.
- e) There will continue to be costs associated with calculating and maintaining the ability to calculate the supply service charges. Those functions continue to be maintained in ComEd systems and work processes due to ComEd's ongoing responsibility of default supply service provider for all customers.
