# Dear ComEd Customer,

Our representative visited your home today.

In response to your inquiry

Please be advised:

We need to trim your maple tree in rear yard away from our lines about 7 feet side clearance  
Thank you

An investigation was made in response to an inquiry we received. As no one was home at the time of our visit, please see the reverse side for the results of our investigation.

If additional information is desired, please call: Kenny

**ComEd.**

Member of the Edison International Group

- No immediate action is necessary. The trees in question will be trimmed on the regularly scheduled cycles.
- The tree(s) interfering with the electric wires will be trimmed within the next few weeks.
- The tree(s) scheduled for removal does not require topping by ComEd.
- The tree(s) scheduled for removal require additional clearance to permit safe removal by you or your tree service contractor. To arrange for this service, you or your contractor must contact ComEd at the number below:

Upon inspection, we found no emergency to your lines from pole to home. ComEd's easement lines (top wires) from pole to pole will be trimmed on its normal maintenance cycle. If you called about tree limbs near the wiring going from the pole to your meter, it is the homeowner's responsibility to trim for this service wire. Please call us at 1-800-Edison-1 two days prior to scheduled trimming to request a service drop at no charge. This ensures that you or a private tree contractor can safely trim away limbs without interference from energized service lines. Once trimming is finished, ComEd will re-connect your service wire that same day.
