V.	SUMMARY	11

1 **I. INTRODUCTION AND BACKGROUND**

2 **A. Identification of Witness**

3 **Q. Please state your name and business address.**

4 A. My name is Lisa J. Gast. My business address is Integrys Energy Group, Inc.
5 (“Integrys”), 700 North Adams Street, P.O. Box 19001, Green Bay, WI 54307-9001.

6 **Q. Are you the same Lisa J. Gast who submitted direct testimony and supplemental**
7 **direct testimony on behalf of The Peoples Gas Light and Coke Company (“Peoples**
8 **Gas”) and North Shore Gas Company (“North Shore”) (together, “the Utilities”) in**
9 **these consolidated dockets?**

10 A. Yes.

11 **B. Purpose of Rebuttal Testimony**

12 **Q. What is the purpose of your rebuttal testimony in this proceeding?**

13 A. The purpose of my rebuttal testimony is to respond to the proposed adjustments to the
14 Utilities’ requested overall rates of return on their proposed rate bases contained in the
15 direct testimony of Illinois Commerce Commission (“Commission”) Staff (“Staff”)
16 witness Michael McNally (ICC Staff Exhibit 5.0), including the cost of debt components
17 of their rates of return. The Utilities’ rebuttal witness Paul R. Moul (NS-PGL Ex. 24.0)
18 will respond to Staff’s and the Illinois Attorney General’s (“AG”) proposed adjustments
19 to the Utilities’ proposed Return on Equity (“ROE”) component of their rates of return.

20 I will also present updated capital structure and cost of capital schedules for each
21 Utility to reflect financing adjustments that result from (1) the Staff and Intervenor
22 adjustments accepted by the Utilities and (2) updates to Utilities’ Test Year 2013 rate
23 case budget presented in NS-PGL Exs. 26.2N and 26.2P (revised Schedule C-2) of

24 Utilities' witness Ms. Sharon Moy's rebuttal testimony as well as updates to the
25 forecasted interest rates on short-and long-term debt. The adjustments and updates
26 leading to these financing adjustments are discussed by other of the Utilities' witnesses.

27 **C. Summary of Conclusions**

28 **Q. Please summarize the conclusions of your rebuttal testimony.**

29 A. First, Staff's and AG's forecasted rate for the Utilities' respective 2013 long-term debt
30 issuances is unreasonably low. Given the forecasted continuation of the current low
31 interest rate environment, the Utilities are planning to issue 30-year term long term debt
32 for their respective forecasted issuances in 2013 instead of the 10-year term assumed in
33 Staff's calculations. The Utilities' respective updated D-3 Schedules incorporate the
34 forecasted rates for 30-year long-term debt.

35 Second, Staff's use of historical spot-day rates for variable rate debt and
36 forecasted new long-term debt issues should be rejected. Using historical rates is not
37 consistent with forecasting the Utilities' costs in a future test year. Furthermore, Staff's
38 objection to the use of forecasts is misplaced when Staff is effectively using historical
39 spot-day rates to forecast the economic conditions and rates that will prevail and impact
40 rates during the test year. There is no reason to believe that interest rates from a single
41 day in 2012 are a better forecast of interest rates that will prevail in 2013 than the
42 published forecasts from sources that are routinely relied upon by bankers, credit issuers
43 and, for certain purposes, even Staff.

44 Third, Staff's adjustments to the Utilities' respective costs of long-term debt for
45 additional expenses related to an interest rate swap are unwarranted. The Utilities entered
46 into the swap to hedge the interest rate risk associated with a long-term debt issuance in

47 order to lock in then historically low interest rates. The costs from this reasonable and
48 prudent transaction should be included in the Utilities' respective costs of long-term debt,
49 just as any savings achieved by it would have been included.

50 Fourth, as discussed in the rebuttal testimony of the Utilities' witness Mr. Moul,
51 the cost of equity proposals made by Staff and the AG are unrealistically low and
52 inconsistent with market expectations.

53 Fifth, as shown in Revised Schedule D-1 Cost of Capital Summary (NS-PGL Ex.
54 23.1P), Peoples Gas calculates an updated cost of capital and rate of return on rate base
55 for the 2013 test year of 7.48%, which reflects a capital structure consisting of 50.42%
56 common equity, 43.62% long-term debt and 5.96% short-term debt, a cost of equity of
57 10.75%, an embedded cost of long-term debt of 4.52% and an embedded cost of short-
58 term debt of 1.47%.

59 As shown in Revised Schedule D-1 Cost of Capital Summary (NS-PGL Ex.
60 23.1N), North Shore calculates an updated cost of capital and rate of return on rate base
61 for the 2013 test year of 7.53%, which reflects a capital structure consisting of 50.31%
62 common equity, 42.35% long-term debt and 7.34% short-term debt, a cost of equity of
63 10.75%, an embedded cost of long-term debt of 4.66% and an embedded cost of short-
64 term debt of 2.00%.

65 **D. Itemized Attachments to Rebuttal Testimony**

66 **Q. Please describe the attachments to your Rebuttal testimony**

67 A. I am submitting the following attachments:

<u>Exhibit No.</u>	<u>Schedule</u>
NS-PGL Ex. 23.1P	Revised Schedule D-1
NS-PGL Ex. 23.2P	Revised Schedule D-2
NS-PGL Ex. 23.3P	Revised Schedule D-3
NS-PGL Ex. 23.1N	Revised Schedule D-1
NS-PGL Ex. 23.2N	Revised Schedule D-2
NS-PGL Ex. 23.3N	Revised Schedule D-3
NS-PGL Ex. 23.4	Interest Rate Hedge Plan Documentation
NS-PGL Ex. 23.5	Interest Rate Forecast Assumptions

68

69 **II. LONG-TERM DEBT**

70 **Q. What positions have Staff and the AG taken on the Utilities' forecasted cost of**
71 **long-term debt respectively?**

72 A. Staff has proposed a downward adjustment from 4.58% to 4.32% for Peoples Gas and
73 from 4.95% to 4.01% for North Shore. AG witness Mr. Brosch has proposed a
74 downward adjustment from 4.58% to 4.46% for Peoples Gas and from 4.95% to 4.60%
75 for North Shore.

76 Staff's and the AG's proposed downward adjustments result mainly from
77 downward adjustments to the forecasted rates for Peoples Gas' and North Shore's 2013
78 long-term debt issuances. Staff also eliminated interest costs related to an interest rate
79 swap on Peoples Gas' Series NN-2 and North Shore's N-2 bonds.

80 **Q. Are Staff's and the AG's adjustments to the Utilities' forecasted long-term debt**
81 **rates in 2013 appropriate?**

82 A. No, they are not appropriate. Staff has assumed that the Utilities will issue long-term
83 debt with a 10-year term at current 10-year rates. Given the forecasted continuation of

84 the current low interest rate environment, the Utilities are planning to issue long-term
85 debt in 2013 with a 30-year term. This will ensure that the Utilities' customers will
86 receive the benefits of the current and forecasted low interest environment for a longer
87 period of time and it will reduce the interest rate risk of the Utilities' debt portfolio.
88 Current forecasts indicate that Peoples Gas and North Shore could issue 30-year long-
89 term debt in 2013 at 4.45% and 4.20%, respectively. These rates are included in the
90 Utilities' updated costs of long-term debt (Schedules D-3) and overall costs of capital
91 (Schedules D-1).

92 Staff and the AG also propose to use historical yields on long-term debt issues
93 rather than forecasted rates as proposed by the Utilities. I will address this issue
94 separately below.

95 **Q. Are Mr. McNally's adjustments to the Utilities' long-term debt expenses related to**
96 **the interest rate swap appropriate?**

97 A. No, they are not appropriate. To support his adjustment, Mr. McNally simply claims that
98 the Utilities have not demonstrated that it was reasonable to enter into the interest rate
99 swap. However, as shown in the Interest Rate Hedge Plan documentation (NS-PGL Ex.
100 23.4), the Utilities, in accordance with their financing plan, issued a total of \$115 million
101 in long-term debt in May 2003. The Utilities considered the potential for volatility in the
102 benchmark 10-year U.S. Treasury market and made a decision to hedge the interest rate
103 exposure of both the Utilities and ratepayers resulting from the May 2003 long-term debt
104 issuance. Given the historically low interest rate environment at the time, the Utilities
105 decided to lock in rates at the then-current market prices in order to provide price security
106 for the ratepayer as well as cost security for the Utilities. The Utilities also recognized

107 that even though interest rates were at historic lows, there was a possibility for rates to
108 decrease even further. Therefore, the Utilities did not hedge the entire portion of the
109 long-term debt issue at one time. Instead, they entered into three separate hedge
110 transactions of approximately equal amounts at three different time periods to capture the
111 benefit of decreasing rates. It is important to note that a hedge is not intended to be a
112 prediction of price movement one way or another, but is rather a risk mitigation strategy.
113 In other words, the Utilities were not predicting that interest rates would be higher when
114 the bonds were issued. They were simply recognizing that interest rates were at historic
115 lows and made a strategic decision to lock in the rate of eventual long-term debt issuance
116 at these low rates.

117 The Utilities' decision to lock in rates in May 2003 was entirely prudent. Indeed,
118 if interest rates had risen above the average rate resulting from the hedge, the Utilities
119 would have recognized a gain that would have served to reduce the overall cost of long-
120 term debt. The modest cost of this particular hedge was the price of the risk mitigation
121 achieved. If a hedge was prudent when made, then its cost or gain should be included in
122 the Utilities' revenue requirement.

123 **Q. Are your proposed adjustments to the Utilities' long-term debt costs reflected in the**
124 **Utilities' updated revenue requirement estimates provided by Utilities witness Ms.**
125 **Moy?**

126 A. Yes they are. Our proposed adjustments to Staff's adjusted figures result in a long-term
127 debt cost for Peoples Gas and North Shore of 4.52% and 4.66%, respectively. This
128 calculation is provided in my revised D-3 schedules, NS-PGL Exs. 23.3P and 23.3N.
129 Short-term debt costs for Peoples Gas and North Shore have been adjusted to 1.47% and

130 2.00%, respectively. This calculation is provided in my revised D-2 schedules, NS-PGL
131 Exs. 23.2P and 23.2N. The adjusted long-term and short-term debt costs are reflected in
132 the rate of return shown in Ms. Moy's revised C-1 Schedules, NS-PGL Exs. 26.1P and
133 26.1N.

134 **III. HISTORICAL VERSUS FORECASTED INTEREST RATES**

135 **Q. What method has Mr. McNally used to determine the cost of short-term debt and**
136 **new fixed rate debt included in Staff Ex. 5.0, Schedule 5.01?**

137 A. Mr. McNally has used historical rates to predict rates for the test year in this case. He has
138 used a November 9, 2012 spot rate for A2/P2 rated commercial paper as published by the
139 Federal Reserve Board to derive the rate to be applied to short-term debt in his capital
140 structure. He has similarly used historical spot-day utility bond yields on new 10-year
141 issuances to estimate the rates on the Utilities' respective 2013 long-term debt issuances.

142 **Q. Why are historical rates a poor predictor of the Utilities' costs for the forecast**
143 **period?**

144 A. Historical rates reflect the historical economic environment. Worse, historical spot-day
145 rates reflect only the economic conditions that prevailed on a single day in the past.
146 Using historical rates to set rates for a future test year assumes that the historical interest
147 rate environment will continue through the test year. By contrast, interest rates forecasts
148 take into account the economic conditions that are expected to prevail during the test
149 year. The Commission should not base the Utilities' rates on inferior information when
150 better information is available.

151 **Q. Does Moody's DataBuffet.com provide the assumptions supporting its interest rate**
152 **forecasts?**

153 A. Yes. In fact, Moody's forecast anticipates that current economic and fiscal conditions
154 will continue to persist into 2013 even though their forecast of U.S. Treasury yields is
155 increasing. This directly conflicts with Mr. Brosch's assertion that rates will remain as
156 they are currently since the Federal Reserve intends on maintaining its accommodative
157 monetary policy. While Mr. Brosch bases his rate conclusion on monetary policy only,
158 Moody's DataBuffet.com bases its forecast on its assessment of not only monetary policy
159 but also fiscal policy, the U.S. dollar, and energy prices. Moody's DataBuffet.com's
160 forecast assumptions are provided in NS-PGL Ex. 23.5.

161 **Q. But isn't it true that forecasts can be wrong, sometimes significantly so?**

162 A. Yes, that is true. But forecasts are the best information we have, whereas there is no
163 reason whatsoever to believe that interest rates on a single day in the past will
164 approximate the rates that will prevail during a future period.

165 **Q. Does Mr. McNally rely on forecasts in his cost estimates of other components of the**
166 **capital structure?**

167 A. Yes. In fact, Mr. McNally uses forecasts of inflation rates and real GDP growth
168 expectations from Global Insight and EIA to support his assertion that U.S. Treasury
169 yields should be used to approximate the long-term risk-free rate used in his ROE
170 estimate using the Capital Asset Pricing Model. He also uses growth rates for the
171 companies in the Delivery Group to formulate his cost of equity estimate in his DCF
172 model. These growth rates are based on the companies' forecasted earnings.

173 **Q. Do Global Insight and EIA also provide forecasts for U.S. Treasury rates that can**
174 **be used as the benchmark for estimating the rates on the Utilities' respective bond**
175 **issuances in 2013?**

176 A. Yes. Global Insight and EIA provide forecasts of 10-year U.S. Treasury yields. These
177 yields closely approximate the forecasted 10-year U.S. Treasury yields from Moody's
178 DataBuffet.com.

179 **Q. What do these forecasts from Global Insight and EIA suggest?**

180 A. Global Insight and EIA forecast yields of 2.16% and 2.76% for 10-year U.S. Treasury
181 securities. This is a marked increase from the December 10, 2012 U.S. Treasury rate of
182 1.62%. If, as Global Insight and EIA predict, U.S. Treasury yields increase in 2013 from
183 their current levels, this also means that rates on the Utilities' respective 2013 bond
184 issuances will increase from the current rates as well.

185 **Q. But aren't the Utilities currently intending to issue 30-year bonds in 2013?**

186 A. Yes, but Global Insight and EIA do not provide a forecast of 30-year U.S. Treasury
187 yields. However, the fact that the Moody's DataBuffet.com forecast of 10-year U.S.
188 Treasury yields approximates the forecasts from sources relied upon by Staff supports the
189 reasonableness of the forecasted rates of 30-year U.S. Treasury yields from Moody's
190 DataBuffet.com.

191 **Q. What method have you used to determine the cost of short-term debt and new fixed**
192 **rate debt included in your updated Schedules D-1, D-2, and D-3?**

193 A. Peoples Gas has updated the forecasted rate on its proposed 2013 debt issue to 4.45%.
194 North Shore has updated the forecasted rate on its proposed 2013 debt issue to 4.20%.

195 This rate is based on an underlying 30-year Treasury rate of 3.20% and 3.45% and an
196 issue spread of 100 basis points. The Utilities used the forecasted 30-year Treasury rate
197 from Moody's DataBuffet.com (as of November 5, 2012) and added 100 basis points
198 which is the spread on Peoples Gas' most recent issuance.

199 The Utilities have also updated the forecasted rates on forecasted monthly short-
200 term debt balances. The monthly short-term interest rates are based on forecasted 1-
201 month commercial paper rates from Moody's DataBuffet.com as of November 5, 2012.
202 The Utilities have determined that the rates forecasted by Moody's DataBuffet.com
203 closely represent rates on AA rated commercial paper; therefore, Peoples Gas has added
204 31 basis points to the interest rate forecast from Moody's DataBuffet.com to approximate
205 the spread between AA and A2/P2 rated commercial paper.

206 **Q. How did you determine the 31 basis point spread between AA and A2/P2 rated**
207 **commercial paper?**

208 A. The 31 basis point spread is the difference between 30-Day AA and A2/P2 commercial
209 paper rates from December 5, 2012, as published by the Federal Reserve Board. This is
210 the same approach presented in my direct testimony.

211 **IV. COST OF COMMON EQUITY**

212 **Q. What positions have the Staff and the AG taken on the Utilities' cost of common**
213 **equity?**

214 A. Compared to the Utilities' originally proposed return on equity of 10.75%, Staff
215 recommends 9.06% for North Shore and Peoples Gas. The AG indicates that the current
216 ROE of 9.45% is consistent with recent ROE findings for gas distribution utilities.¹

217 **Q. Has the testimony by Staff witness Mr. McNally or AG witness Mr. Brosch caused**
218 **the Utilities to change their proposed cost of equity?**

219 A. No. However, Mr. Moul's rebuttal testimony provides further support for the
220 recommended cost of equity of 10.75% and demonstrates that methods used by Mr.
221 McNally are unsupported and result in an unrealistically low ROE. Furthermore, the
222 9.06% ROE recommended by Mr. McNally would be equal to the lowest ROE authorized
223 during 2012.

224 Mr. Brosch claims that the currently authorized 9.45% ROE is consistent with
225 recent ROE findings for other gas distribution utilities. This is only true if you consider
226 the third lowest ROE authorized in 2012 to be consistent. During 2012, authorized ROEs
227 ranged from 9.06% to 10.5% with an average and median ROE of 9.87% and 9.83%,
228 respectively. If Mr. Brosch is recommending that the Commission authorize an ROE
229 consistent with recent findings, a 9.87% ROE is even more consistent with that
230 recommendation.

231 **V. SUMMARY**

232 **Q. In summary, what are your conclusions regarding the proposals by Staff and AG**
233 **concerning the Utilities' overall rate of return on rate base in this case?**

234 A. My conclusions are as follows:

¹ CUB-City also used the currently authorized ROE of 9.45% to derive their proposed Rate of Return

- 235 • Based on (a) the Utilities’ revised capital structure, (b) their cost of equity, (c) their
236 updated cost of short-term debt, and (d) their updated cost of long-term debt, the
237 allowed overall rate of return on rate base should be 7.48% for Peoples Gas and
238 7.53% for North Shore. The rates compare to the current authorized return for
239 Peoples Gas of 6.94% and 7.43% for North Shore.
- 240 • Staff’s adjustments to the forecasted rates on Peoples Gas’ forecasted long-term debt
241 in 2013 should be updated to reflect the Utilities’ current plan to issue 30-year debt
242 vs. 10-year debt. The Utilities’ respective updated D-3 Schedules reflect this change.
- 243 • Using historical interest rates is not consistent with forecasting the Utilities’ costs in a
244 forecasted test year. Historical interest rates reflect only the current economic
245 environment. They are inconsistent with a forecasted test year and assume that
246 interest rates in the past will continue to be available through the 2013 test year.
247 Forecasted interest rates allow for forecasted changes in the economic environment.
248 The Commission should not base the Utilities’ rates on inferior information when
249 better information is available.
- 250 • As discussed in the rebuttal testimony of the Utilities’ witness Mr. Moul, the cost of
251 equity proposals made by Staff and the AG are inadequate and inconsistent with
252 market expectations as measured by the proxy group of companies used in Mr.
253 Moul’s return on equity study. An ROE that is out of line with current market
254 expectations would have a harmful effect on the Utilities’ ability to raise sufficient
255 capital at a reasonable cost.

256 **Q. Does this complete your rebuttal testimony?**

257 A. Yes.
