Subject: ameren il. rivers mt. zion sub station location

Hi my name is todd rigg I live at 3545 traughber rd. mt. zion, il. 62549, which is about 300 yds. from the proposed sub station site in mt. zion. My wife and I have two daughters Ava age 6 and Anna age 2, first and foremost I am concerned with the adverse health issues this line will create for my family. Also the value of my property and house which would be drastically reduced. The home we live in sits on 4.5 acres, I built it myself and put our life savings into it. I fear if this sub station and lines goes near us we will loose everything we worked so hard for. The village of mt. zion has presented a couple alternative locations out of the village and away from homes, which are also more suitable for a sub station. The proposed location is rolling hills (80 foot valleys) and according to consultants hired by the village of mt. zion that used to work for cips, the proposed site will not support a sub station, since you would be building on fill. I ask you would you want this in your back yard. I pray this can be moved out to a more remote location with NO homes near. I feel that if by moving this out away from homes is going to cost a little more is'nt it worth it if just 1 child does not get cancer from the emf's. thank you for your time todd rigg 3545 traughber rd. mt. zion, il. 62549 217-521-5894
