

Commonwealth Edison Company's Response to
Illinois Commerce Commission ("STAFF") Data Request
EPS 4.01 - 4.03

OFFICIAL FILE

Date Received: November 8, 2013 C.C. DOCKET NO. 13-0552

Date Served: November 13, 2013 Staff Cross Exhibit No. 2

Witness _____

Date 12-3-13 Reporter W. Kille

REQUEST NO. EPS 4.01:

As follow-up to the Company's response to Staff Data Request EPS 1.03, please provide the following data for the Company's Customer Select pilot program, the Summer 2013 small-scale pilot program and the full-scale AMI deployment that began in September 2013:

- (a) the number and percentage of customers who affirmatively elected not to have an AMI meter; and
- (b) the number and percentage of customers for which ComEd made or has made multiple attempts to install AMI meters but were or have been unable to access customers' premises to install the meters.

RESPONSE:

In order to provide an answer that is clear and understandable, ComEd is providing its understanding of certain language used in this data request. ComEd's response is based on these understandings.

1. ComEd understands "Customer Select pilot program" to refer to ComEd's Commission-approved AMI Pilot (2009-2011).
2. The AMI Pilot program consisted of the deployment of approximately 128,000 AMI meters in three separate geographic areas of ComEd's service territory. The areas consisted of the "Innovation Corridor" (which included the towns of Bellwood, Berwyn, Broadview, Forest Park, Hillside, Maywood, Melrose Park, Oak Park, and River Forest), Chicago's Humboldt Park neighborhood, and two high rises in Chicago's central business district. (Doherty Dir., ComEd Ex. 2.0, 9:178-183). For purposes of this response, ComEd provides statistics from the "Innovation Corridor" only.
3. The meters installed in the Summer of 2013 (246 meters in Leyden Township) as part of a test run of current processes and procedures for full deployment of AMI meters were not considered as a separate program or pilot and are not tracked separately; ComEd has included statistics for these meters with the AMI Pilot metrics.
4. Full-scale AMI Deployment statistics begin with meter installations and activities on or after September 3, 2013.
5. ComEd understands the request for the "number and percentage of customers for which ComEd made or has made multiple attempts to install AMI meters but were or have been unable to access customers' premises to install the meters" to refer to customers/premises for which ComEd has been unsuccessful to date in its attempts to install an AMI meter; ComEd does not understand this request to seek the number and percentage of customers/premises for which ComEd successfully installed an AMI meter through multiple attempts.

- (a) Please see the attachment labeled as EPS 4.01_Attach 1. This attachment is based on a weekly report providing detailed information with respect to customer meter refusal requests.
- (b) During the AMI Pilot, ComEd exchanged over 98,000* meters within the Innovation Corridor. 14,325 meters were not exchanged for a variety of reasons including access issues, meter refusals, and technical limitations under the ANI Pilot constraints. See the Direct Testimony of David B. Doherty, ComEd Ex. 2.0 at 23:192 - 197. ComEd has made unsuccessful multiple attempts to install AMI meters at 944 premises, or 0.95% ($944/(98,000+944)$) of the attempted installations within the Innovation Corridor.

Full deployment began on September 3, 2013. Within the active deployment area, ComEd has installed over 33,385 meters. Through November 1, 2013, ComEd made or has made multiple attempts to install AMI meters at 219 premises, or 0.65% ($219/(33,385+219)$) of the attempted installations.

* Total AMI pilot installations (attempted + complete) rounded to the nearest 1,000.
