

## **APPENDIX 2**

## **Description of the Proposed Services, Customers, and Territories**

Park Power is seeking a license to service customers in all ComEd service territory in the State of Illinois. Park Power will be marketing its services primarily to residential and small commercial customers, although it expects to serve all customer classes including large commercial and industrial. Park Power will offer both fixed and variable rate products to its customers.

Park Power will not engage in any speculative activities nor will it purposely carry load positions into the real time markets. For both long and short term load forecasting, Park Power will use a third party developed, proprietary statistical model that utilizes ISO and utility load forecasts, historical portfolio level loads, historical weather and weather forecasts as inputs. Utilizing these short and long term load forecasts, Park Power has the capability to stress test its portfolio of short positions to ascertain both its peak market exposure and its peak collateral requirements to PJM.
