Last Winter Comparison

You used **10% less** electricity than your efficient neighbors.

Your usage last winter: Nov '14-Mar '15

How you did last winter

GREAT 😊😊

Good

Most Efficient

* kWh: A 100-Watt bulb burning for 10 hours uses 1 kilowatt-hour.

Who are your Neighbors?

All Neighbors: Approximately 100 occupied, nearby homes (avg 0.09 mi away) that have gas heat

Efficient Neighbors: The most efficient 20 percent from the "All Neighbors" group

Set an Energy Savings Goal

After you set a goal, you'll receive progress updates in your Home Energy Report. See how the changes you're making — no matter how small — improve your energy savings and get you closer to your goal.

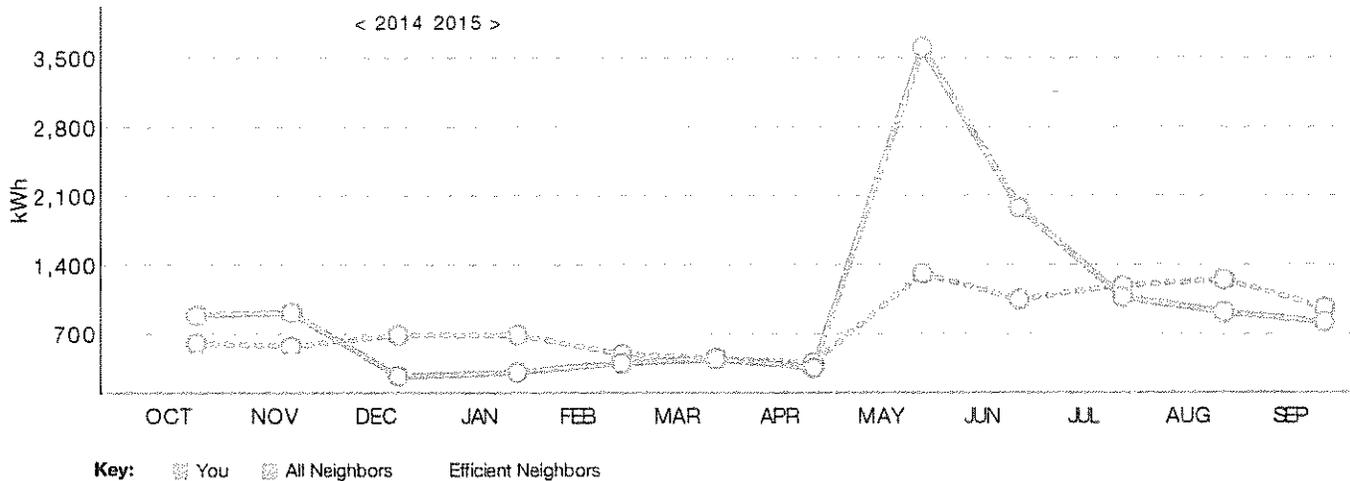

Join your neighbors and set your energy savings goal at ComEd.com/MyAccount.

Last 12 Months Neighbor Comparison

You used **24% more** electricity than your neighbors.
This costs you about **\$269 extra** per year.

Personalized tips below. For more energy-saving incentives and rebates, visit ComEd.com/HomeSavings

Quick Fix

Something you can do right now

Hang laundry to dry

A typical clothes dryer uses up to four times more energy than a new clothes washer. Hang-drying laundry saves energy and reduces wear and tear on clothes.

To save energy and keep your clothes feeling like new, use clotheslines, drying racks, or plastic hangers to air-dry clothes. Even partially drying your clothes before using the dryer can help.

If you want your laundry to be softer, throw it in the dryer for about five minutes after air drying.

Smart Purchase

An affordable way to save more

Use and switch off power strips

Many electronics continue to draw power even when they are turned off. These "vampire devices" waste electricity throughout the day.

Plug devices into power strips and turn the strips off when they're not in use to stop drawing unnecessary energy.

Power strips allow you to control multiple products at once and can be easier to reach than the outlet. Look for other convenient features, such as remote controls and timers.

Great Investment

A big idea for long-term savings

Buy ENERGY STAR® appliances

The Department of Energy tests the energy efficiency of many home appliances and electronics, and the best earn the official ENERGY STAR label. In 2010, the average household saved about \$150 thanks to this program.

The ENERGY STAR label can be found on efficient models of clothes washers, refrigerators, televisions, computers, and many other products.

Visit www.energystar.gov for more details.
