would show when comparing 1991 and 1992. Moreover, for that matter the same would apply if the decision made ~~by~~ by the court was correct for there would be a 68% increase within the same period. We find that the billings after the alleged tap was removed are lower than the alleged "steep" drop point of November 20, 1992. Mr. McCarthy states that the period after the tap was removed would show the most pg 48.

The judge stated that complainant had the right to undermine the calculations pg 170.

There were undermined not only by the complainant but also by Mr. Bulanda and even the judge if he has to depend on an experiment that does use only one pipe as using gas from the supply when in fact there are four pipes receiving gas in home.

The main was installed in two days pages 38-39. These two days were November 18, and 19, 1992 and it was these workers that did the reading ~~on~~ posted on November 20, 1992 if the alleged problem with a "steep" drop in the gas usage at that point it is the problem created by the respondent's own workers as stated by complainant in complaint.

Respondant placed a lien on the home but it was while Ms McCann was the owner (exhibit 9). This further shows that the problem was with the previous owner not complainant.
