

The electric industry restructuring law, passed in 1997 by the Illinois General Assembly, provides many benefits for all customers. In compliance with this law, electric utilities and suppliers provide an Environmental Disclosure Statement for the 12 months ending every quarter.

The information in this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between July 1, 2011 and June 30, 2012.

In addition to the electricity sources shown on the table and pie chart, ComEd has also procured renewable energy certificates (RECs) each spring since 2008 to fulfill its obligation under the Illinois Renewable Portfolio Standard. A REC represents the beneficial environmental attributes associated with one MWh of renewable generation from resources such as wind, hydroelectric, biomass and solar. This year, ComEd procured a total of 4,072,783 RECs in two separate events, one of which is the Annual procurement and the other that covers multiple years – with deliveries starting in June 2013. Roughly 74 percent of these RECS will be from wind generators or solar photovoltaic panels located primarily in Illinois and adjoining states.

Furthermore, near the end of 2010, a Long-term Renewables procurement event was held, with ComEd procuring a total of 1,261,725 Wind and Solar RECs per year for a 20-year period. Deliveries under these Long-term Renewable contracts began June 2012.

SMART IDEAS[®] HELPING BUSINESSES' BOTTOM LINE

Since the inception of ComEd's *Smart Ideas for Your Business*[®] energy-efficiency program in 2008, 9,398 participating businesses received nearly \$84 million in financial incentives and services reducing energy usage by more than 1,261,000,000 kilowatt-hours (kWh). This is the equivalent of removing the annual greenhouse gas emissions of more than 174,000 cars from the road. These energy savings translate to financial savings of approximately \$95 million*.

ComEd's program makes energy-efficiency upgrades more affordable to its business customers and lowers their investment's payback period. Rebate incentives on energy efficient equipment, HVAC, motors, lighting and lighting controls, and also low-cost or free on-site energy assessments are available to qualifying customers in the commercial, industrial and small business marketplace.

To learn more, visit ComEd.com/BizIncentives or call the *Smart Ideas* hotline at 888-806-2273.

* based on 7.5 cents per kWh
Smart Ideas[®] is funded by ComEd customers in compliance with Illinois Public Act 95-0481.

ENVIRONMENTAL DISCLOSURE INFORMATION

Twelve Months Ending June 30, 2012

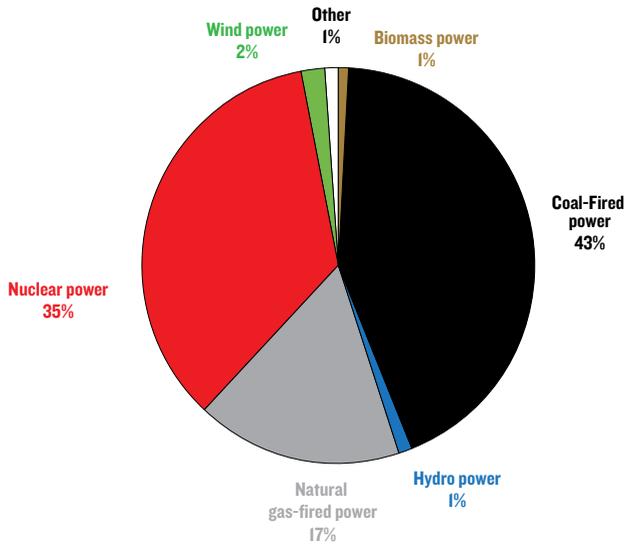

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

COMED'S ENVIRONMENTAL DISCLOSURE STATEMENT

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 III Admn. Code 421.

Sources ¹ of Electricity Supplied for the 12 months ending June 30, 2012	Percentage of Total
Biomass power	1%
Coal-fired power	43%
Hydro power	1%
Natural gas-fired power	17%
Nuclear power	35%
Oil-fired power	0%
Solar power	0%
Wind power	2%
Other resources	1%
Unknown resources purchased from other companies	0%
TOTAL	100%

SOURCES OF ELECTRICITY SUPPLIED FOR THE 12 MONTHS ENDING JUNE 30, 2012

AVERAGE AMOUNTS OF EMISSIONS² and AMOUNT OF NUCLEAR WASTE³ per 1000 kilowatt-hours (kWh) PRODUCED FROM KNOWN SOURCES for the 12 months ending June 30, 2012

Carbon dioxide	1096.02 lbs.
Nitrogen oxides	0.98 lbs.
Sulfur dioxide	2.80 lbs.
High level nuclear waste	0.006 lbs
Low level nuclear waste	0.0004 cubic feet

¹ These figures constitute the aggregation of information provided by ComEd's wholesale energy suppliers, most of whom have indicated that their source is the "PJM system mix" And a minor amount from local Landfill gas generators. The PJM system mix is the collective generation produced within the PJM Interconnection, which is the regional transmission organization that maintains the safety, reliability, and security of the transmission system and operates an efficient and effective wholesale electric market in 13 states and the District of Columbia. ComEd's electric service territory is within the PJM footprint.

² The source for the baseline emissions data for the portion of the emissions that are associated with PJM system mix is PJM Environmental Information Services, Inc., (www.pjm-eis.com). For energy that is sourced from the PJM system mix, emissions rates are calculated using the most current emissions data from the PJM System Mix by Fuel Reports. These reports exclude the effects of energy imports, exports, external generation and behind-the-meter generation. The PJM System Mix reports also exclude the effects of any claims on any specific component(s) of the mix.

³ Nuclear Waste rates were calculated based on Generation Net for Sale and quantities of waste at the nuclear stations that were previously owned by ComEd.
