Environmental Information for ConEdison Solutions Retail Access Electricity Supply Customers in Illinois

When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Electricity customers served by Consolidated Edison Solutions, Inc. (ConEdison Solutions) are supplied by residual power purchased from the PJM Interconnection (PJM), the local regional transmission organization. ConEdison Solutions does not provide power from any particular generating facilities; rather, the PJM residual power purchased by ConEdison Solutions consists of electricity from a variety of power plants that PJM then transmits throughout the region as needed to meet the requirements of all customers in the PJM territory (including Pennsylvania, New Jersey, Maryland, Delaware, Washington, D.C., and the Commonwealth Edison territory in Illinois). ConEdison Solutions also buys renewable power to meet the requirements of the Illinois renewable portfolio standard.

ConEdison Solutions reports fuel sources and emissions data from PJM to its customers quarterly, allowing customers to compare data among the companies providing electricity service in Illinois.

ELECTRICITY FACTS ConEdison Solutions Data

ConEdison Solutions Commonwealth Edison Territory Mix

The following distribution of energy resources was used to produce electricity in Illinois.

Coal	45.02%
Oil	.27%
Natural Gas	16.4%
Nuclear	34.4%
Renewable	3.91%
<hr/>	
Total	100%

(Actual Total may vary slightly from 100% due to rounding)

Air Emissions

Average Nitrogen Oxides (NO_x), Sulfur Dioxide (SO_x), and Carbon Dioxide (CO₂) emissions for the electricity mix used by ConEdison Solutions in Illinois as compared to the overall Supply Mix.

Emission Type	Lbs. per MWh	Percentage of PJM System Mix Average
Nitrogen Oxides (NO _x)	.90	95.1%
Sulfur Dioxide (SO ₂)	2.32	101.5%
Carbon Dioxide (CO ₂)	1059.7	93.8%

The PJM system mix represents all resources used for electricity generation in the region. ConEdison Solutions purchases power from the PJM residual mix, which represents all generation that is not specifically claimed by another supplier and from renewable energy sources to meet the Illinois renewable portfolio standard.

CO₂ is a “greenhouse gas” which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. Nitrogen Oxides also react to form ground level ozone, an unhealthy component of “smog.”
